

Catalyst/Aspect Enhanced Multi-Asset Fund
Class A: CASAX Class C: CASCX Class I: CASIX

SUMMARY PROSPECTUS
NOVEMBER 1, 2024

Before you invest, you may want to review the Fund's complete prospectus, which contains more information about the Fund and its risks. You can find the Fund's prospectus and other information about the Fund at <https://catalystmf.com/literature-and-forms/>. You can also get this information at no cost by calling 1-866-447-4228, emailing info@catalystmf.com or by asking any financial intermediary that offers shares of the Fund. The Fund's prospectus and statement of additional information, both dated November 1, 2024 are incorporated by reference into this summary prospectus and may be obtained, free of charge, at the website or phone number noted above.

FUND SUMMARY: CATALYST/ASPECT ENHANCED MULTI-ASSET FUND

Investment Objective: The Fund’s objective is to seek long-term capital appreciation.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.** You may qualify for sales charge discounts on purchases of Class A shares if you and your family invest, or agree to invest in the future, at least \$50,000 in the Fund. More information about these and other discounts is available from your financial professional and is included in the section of the Fund’s prospectus entitled **How to Buy Shares** on page 122 and **Appendix A – Intermediary-Specific Sales Charge Reductions and Waivers**, and in the sections of the Fund’s Statement of Additional Information entitled **Reduction of Up-Front Sales Charge on Class A Shares** on page 63 and **Waiver of Up-Front Sales Charge on Class A Shares** on page 63.

Shareholder Fees (fees paid directly from your investment)	Class A	Class C	Class I
Maximum Sales Charge (Load) Imposed on Purchases (as a % of offering price)	5.75%	None	None
Maximum Deferred Sales Charge (Load) (as a % of the original purchase price)	1.00%¹	None	None
Maximum Sales Charge (Load) Imposed on Reinvested Dividends and other Distributions	None	None	None
Redemption Fee	None	None	None
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)			
Management Fees	1.75%	1.75%	1.75%
Distribution and Service (12b-1) Fees	0.25%	1.00%	0.00%
Other Expenses	1.32%	1.32%	1.26%
Acquired Fund Fees and Expenses²	0.06%	0.06%	0.06%
Total Annual Fund Operating Expenses	3.38%	4.13%	3.07%
Fee Waiver and/or Expense Reimbursement³	(1.08)%	(1.08)%	(1.02)%
Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement	2.30%	3.05%	2.05%

¹ The 1.00% maximum deferred sales charge may be assessed in the case of investments at or above the \$1 million breakpoint (where you do not pay an initial sales charge) on shares redeemed within two years of purchase.

² Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies. The total annual fund operating expenses in this fee table will not correlate to the expense ratio in the Fund’s financial highlights because the financial statements include only the direct operating expenses incurred by the Fund, not the indirect costs of investing in other investment companies.

³ The Fund’s advisor, Catalyst Capital Advisors LLC (the “Advisor”) has contractually agreed to waive fees and/or reimburse expenses of the Fund to the extent necessary to limit total annual fund operating expenses (excluding brokerage costs; acquired fund fees and expenses; borrowing costs such as (a) interest and (b) dividends on securities sold short; taxes and, extraordinary expenses, such as regulatory inquiry and litigation expenses) at 2.24%, 2.99% and 1.99% for Class A shares, Class C shares and Class I shares, respectively, through October 31, 2025. This agreement may be terminated by the Trust’s Board of Trustees only on 60 days’ written notice to the advisor or upon the termination of the advisory agreement between the Trust and the Advisor. Fee waivers and expense reimbursements are subject to possible recoupment by the advisor from the Fund in future years on a rolling three-year basis (within the three years after the fees have been waived or reimbursed) so long as such recoupment does not cause the Fund’s expense ratio (after the repayment is taken into account) to exceed the lesser of: (i) the Fund’s expense limitation at the time such expenses were waived and (ii) the Fund’s current expense limitation at the time of recoupment.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated, and then hold or redeem all of your shares at the end of those periods. The Example only accounts for the Fund’s expense limitation through its expiration period, October 31, 2025, and then depicts the Fund’s total annual expenses thereafter. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

<u>YEAR</u>	Class A	Class C	Class I
1	\$795	\$308	\$208
3	\$1,460	\$1,157	\$852
5	\$2,146	\$2,022	\$1,522
10	\$3,963	\$4,249	\$3,312

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. The portfolio turnover rate of the Fund for the fiscal period ended June 30, 2024 was 6% of the average value of its portfolio.

Principal Investment Strategies:

The Fund seeks to achieve its investment objective by investing in a portfolio composed of two components: (i) a “Managed Futures Component” consisting of global financial and commodity futures, currency forwards and other derivative contracts on or related to sectors or assets classes including currencies, interest rate instruments, stock indices, metals, energy and agricultural commodities, and (ii) a “60/40 Component” consisting of a portfolio investing in U.S. equity and U.S. fixed income markets through financial futures and U.S. bond exchange-traded funds (“ETFs”). The Fund expects to allocate between 5%-40% of its assets in the Managed Futures Component and between 40%-60% of its assets in the 60/40 Component. The Fund holds the balance in cash and cash equivalents.

Managed Futures Component

The Managed Futures Component of the Fund’s portfolio may hold long and short positions in futures, forwards and other derivative contracts, and maintains cash and cash equivalents to be utilized as margin. The Managed Futures Component of the Fund’s assets are allocated among various sectors or asset classes including currencies, interest rate instruments, stock indices, metals, energy and agricultural commodities. Investments may be made in domestic and foreign markets, including emerging markets. Investment in these instruments may be made by the Fund directly or indirectly by investing through its Subsidiary (as described below).

The Advisor engages a sub-advisor, Aspect Capital Limited (the “Sub-Advisor”), to manage the Fund’s portfolio. In managing the Managed Futures Component, the Sub-Advisor utilizes a set of proprietary trading systems, developed by the Sub-Advisor, to determine the Fund’s asset allocations. A quantitative process is used to collect, process and analyze market price data in order to determine the direction and strength of the trend opportunities in each sector or asset

class of the component, and determine buy or sell decisions accordingly. The process used is similar across all sectors and contracts, based on the Sub-Advisor's belief in diversification and with the aim of avoiding over-optimization and/or over-fitting of the model to individual market idiosyncrasies or to the recent past. The quantitative process seeks to harvest opportunities over various timescales, from a small number of days to six months or more. By maintaining a comparatively small exposure to any individual contract, the strategy seeks to achieve true sector and contract diversification, thereby allowing a wide range of opportunities to be captured and maximizing expected long-term, risk-adjusted returns.

The Fund actively trades this Component of the Fund's portfolio, which may lead to higher transaction costs that may offset Fund performance.

60/40 Component

The 60/40 Component is intended to provide the Fund's portfolio with long-term, strategic broad-based exposure to liquid U.S. equity and U.S. fixed income securities, similar to that of a traditionally weighted U.S. investment portfolio. The Sub-Advisor aims to allocate approximately 60% of the Component's assets to U.S. equity markets through investment in S&P 500 futures and approximately 40% of the Component's assets to U.S. bond markets through investing in various futures and/or U.S. bond ETFs. The Fund's 60/40 Component investments are taken on a relatively passive, long-only, "buy-and-hold" basis. With respect to the 60/40 Component's 40% allocation to the U.S. bond markets, the Fund may invest in ETFs that hold securities of any maturity or duration and intends to hold a majority of the portfolio in investment grade corporate bonds (rated BBB or higher by S&P Global Ratings or the equivalent by another nationally recognized statistical ratings organization). The longer a security's duration, the more sensitive it will be to changes in interest rates.

The Fund is classified as "non-diversified" for purposes of the Investment Company Act of 1940, as amended (the "1940 Act"), which means that it is not limited by the 1940 Act with regard to the portion of its assets that may be invested in the securities of a single issuer.

Investments in Subsidiary

The Advisor executes a portion of the Fund's strategy by investing up to 25% of its total assets in the Subsidiary. The Subsidiary invests the majority of its assets in commodities futures and other derivative contracts. The Subsidiary is subject to the same investment restrictions as the Fund, when viewed on a consolidated basis.

Principal Risks of Investing in the Fund:

As with any mutual fund, there is no guarantee that the Fund will achieve its objective. Investment markets are unpredictable and there will be certain market conditions where the Fund will not meet its investment objective and will lose money. The Fund's net asset value and returns will vary and you could lose money on your investment in the Fund and those losses could be significant.

The following summarizes the principal risks of investing in the Fund. These risks could adversely affect the net asset value, total return and the value of the Fund and your investment.

Agricultural Sector Risk. Economic forces, including forces affecting agricultural markets, as well as government policies and regulations affecting agriculture companies, could adversely impact the Fund's investments. Soft commodities, grains and livestock production and trade flows are significantly affected by government policies and regulations.

Cash and Cash Equivalent Risk. At any time, the Fund may have significant investments in cash and cash equivalents. When a substantial portion of a portfolio is held in cash and cash equivalents, there is the risk that the value of the cash account, including interest, will not keep pace with inflation, thus reducing purchasing power over time.

Changing Fixed Income Market Conditions. As interest rates rise, there is risk that rates across the financial system also may rise. Changes in government intervention may have adverse effects on the Fund's investments, volatility, and illiquidity in debt markets. Interest rate increases could cause the value of any Fund that invests in fixed income securities to decrease to the extent that it invests in fixed income securities. Federal Reserve policy changes may expose fixed-income and related markets to heightened volatility and may reduce liquidity for certain Fund investments, which could cause the value of a Fund's investments and share price to decline.

Commodity Risk. Investing in the commodities markets may subject the Fund to greater volatility than investments in traditional securities. Commodity prices may be influenced by unfavorable weather, animal and plant disease, geologic and environmental factors as well as changes in government regulation such as tariffs, embargoes or burdensome production rules and restrictions.

Counterparty Risk. Counterparty risk is the risk that a counterparty to a financial instrument held by the Fund or by a special purpose or structured vehicle invested in by the Fund may become insolvent or otherwise fail to perform its obligations, and the Fund may obtain no or limited recovery of its investment, and any recovery may be significantly delayed.

Credit Risk. Credit risk is the risk that an issuer of a security will fail to pay principal and interest in a timely manner, reducing the Fund's total return.

Currency Risk. Currency trading involves significant risks, including market risk, interest rate risk, country risk, counterparty credit risk and short sale risk. Market risk results from the price movement of foreign currency values in response to shifting market supply and demand. Since exchange rate changes can readily move in one direction, a currency position carried overnight or over a number of days may involve greater risk than one carried a few minutes or hours. Interest rate risk arises whenever a country changes its stated interest rate target associated with its currency. Country risk arises because virtually every country has interfered with international transactions in its currency. Interference has taken the form of regulation of the local exchange market, restrictions on foreign investment by residents or limits on inflows of investment funds from abroad. Restrictions on the exchange market or on international transactions are intended to affect the level or movement of the exchange rate. This risk could include the country issuing a new currency, effectively making the "old" currency worthless.

Derivatives Risk. Even a small investment in derivatives may give rise to leverage risk (which can increase volatility and magnify the Fund's potential for loss), counterparty risk (the risk that

a counterparty (the other party to a transaction or an agreement or the party with whom the Fund executes transactions) to a transaction with the Fund may be unable or unwilling to make timely principal, interest or settlement payments), and can have a significant impact on the Fund's performance. Derivatives are also subject to credit risk (the counterparty may default) and liquidity risk (the Fund may not be able to sell the security or otherwise exit the contract in a timely manner).

Duration Risk. A portfolio with a longer average portfolio duration may be more sensitive to interest rate changes. A heightened risk is posed by rising interest rates to a fund whose portfolios includes longer-term fixed income securities.

Emerging Market Risk. The Fund may invest in countries with newly organized or less developed securities markets. There are typically greater risks involved in investing in emerging markets securities. Generally, economic structures in these countries are less diverse and mature than those in developed countries and their political systems tend to be less stable. There may also be less reliable or publicly available information about emerging markets due to non-uniform regulatory, auditing or financial recordkeeping standards (including material limits on PCAOB inspection, investigation, and enforcement), which could cause errors in the implementation of the Fund's investment strategy. Emerging market economies may be based on only a few industries, therefore security issuers, including governments, may be more susceptible to economic weakness and more likely to default. Emerging market countries also may have relatively unstable governments, weaker economies, and less-developed legal systems with fewer security holder rights. The Fund's performance may depend on issues other than those that affect U.S. companies and may be adversely affected by different rights and remedies associated with emerging market investments, or the lack thereof, compared to those associated with U.S. companies. Investments in emerging markets countries may be affected by government policies that restrict foreign investment in certain issuers or industries.

Energy Sector Risk. Because of the Fund's exposure to this sector, the performance of the Fund is tied closely to and affected by developments in the energy sector, such as the possibility that government regulation will negatively impact companies in this sector. Energy infrastructure entities are subject to the risks specific to the industry they serve.

Equity Security Risk. Equity securities, including common stocks, are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. Investor perceptions are based on various and unpredictable factors, including expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction and global or regional political, economic and banking crises.

ETFs Risk. The cost of investing in the Fund will be higher than the cost of investing directly in the ETFs in which it invests and may be higher than other mutual funds that invest directly in stocks and bonds. Each ETF is subject to specific risks, depending on the nature of the ETF. Like an open-end investment company (mutual fund), the value of an ETF can fluctuate based on the prices of the securities owned by the ETF, and ETFs are also subject to the following additional risks: (i) the ETF's market price may be less than its net asset value; (ii) an active market for the ETF may not develop; (iii) market trading in the ETF may be halted under certain circumstances and (iv) the value of an ETF can fluctuate based on the prices of the securities held by the ETF.

Fixed Income Risk. When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default) and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.

Foreign Exchanges Risk. A portion of the derivatives trades made by the Fund may take place on foreign markets. Neither existing CFTC regulations nor regulations of any other U.S. governmental agency apply to transactions on foreign markets. Some of these foreign markets, in contrast to U.S. exchanges, are so-called principals' markets in which performance is the responsibility only of the individual counterparty with whom the trader has entered into a commodity interest transaction and not of the exchange or clearing corporation. In these kinds of markets, there is risk of bankruptcy or other failure or refusal to perform by the counterparty.

Foreign Investment Risk. Since the Fund's investments may include foreign securities, the Fund is subject to risks beyond those associated with investing in domestic securities. The value of foreign securities is subject to currency fluctuations. Foreign companies are generally not subject to the same regulatory requirements of U.S. companies thereby resulting in less publicly available information about these companies. In addition, foreign accounting, auditing and financial reporting standards generally differ from those applicable to U.S. companies.

Forwards Risk. Forward contracts are individually negotiated and privately traded so they are dependent upon the creditworthiness of the counterparty and subject to counterparty default risk and liquidity risk. If a counterparty defaults and fails to deliver or settle a forward trade, replacing the transaction may be costly. Liquidity risk exists because no organized secondary market exists to trade or dispose of forward obligations.

Futures Risk. The Fund's use of futures involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) leverage risk (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the futures contract may not correlate perfectly with the underlying investment. Investments in futures involve leverage, which means a small percentage of assets invested in futures can have a disproportionately large impact on the Fund. This risk could cause the Fund to lose more than the principal amount invested. Futures contracts may become mispriced or improperly valued when compared to the Advisor's expectation and may not produce the desired investment results. Additionally, changes in the value of futures contracts may not track or correlate perfectly with the underlying securities because of temporary, or even long term, supply and demand imbalances and because futures do not pay dividends unlike the stocks upon which they are based.

Interest Rate Risk. Changes in short-term market interest rates will directly affect the yield on the shares of the Fund whose investments are normally invested in floating rate debt. If short-term market interest rates fall, the yield on the Fund's shares will also fall. Conversely, when

short-term market interest rates rise, because of the lag between changes in such short-term rates and the resetting of the floating rates on the floating rate debt in the Fund's portfolio, the impact of rising rates will be delayed to the extent of such lag. Rising interest rates pose a heightened risk to the Fund because its portfolio includes longer-term fixed income securities.

Large Capitalization Stock Risk. The Fund may invest in large capitalization companies. The securities of such companies may underperform other segments of the market because such companies may be less responsive to competitive challenges and opportunities and may be unable to attain high growth rates during periods of economic expansion.

Leverage Risk. Using derivatives like futures and options to increase the Fund's combined long and short exposure creates leverage, which can magnify the Fund's potential for gain or loss and, therefore, amplify the effects of market volatility on the Fund's share price.

Limited History of Operations Risk. The Fund is a new fund and has a limited history of operations for investors to evaluate.

Management Risk. The portfolio managers' judgments about the attractiveness, value and potential appreciation of particular stocks, options or other securities in which the Fund invests may prove to be incorrect and there is no guarantee that the portfolio managers' judgment will produce the desired results.

Market Risk. Overall stock market risks may also affect the value of the Fund. Factors such as domestic economic growth and market conditions, interest rate levels and political events affect the securities markets.

Medium (Mid) Capitalization Stock Risk. The earnings and prospects of mid-capitalization companies are more volatile than larger companies, they may experience higher failure rates than larger companies and normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures.

Metals Sector Risk. The prices of precious metals and industrial metals operation companies are affected by the price of precious metals such as platinum, palladium and silver, as well as other metals prices and prevailing market conditions. These prices may be volatile, fluctuating substantially over short periods of time.

Model and Data Risk. Like all quantitative analysis, the investment models utilized by the Advisor or Sub-Advisor carry the risk that the ranking system, valuation results and predictions might be based on one or more incorrect assumptions, insufficient historical data, inadequate design, or may not be suitable for the purpose intended. In addition, models may not perform as intended for many reasons including errors, omissions, imperfections or malfunctions. Because the use of models are usually based on data supplied by third parties, the success of the Fund's use of such models is dependent on the accuracy and reliability of the supplied data. Historical data inputs may be subject to revision or corrections, which may diminish data reliability and quality of predictive results. Changing and unforeseen market dynamics could also lead to a decrease in the short-term or long-term effectiveness of a model. Models may lose their predictive validity and incorrectly forecast future market behavior and asset prices, leading to

potential losses. No assurance can be given that a model will be successful under all or any market conditions.

Non-diversification Risk. Because a relatively high percentage of the Fund's assets may be invested in the securities of a limited number of companies that could be in the same or related economic sectors, the Fund's portfolio may be more susceptible to any single economic, technological or regulatory occurrence than the portfolio of a diversified fund.

Security Risk. The value of the Fund may decrease in response to the activities and financial prospects of an individual security in the Fund's portfolio.

Small Capitalization Stock Risk. To the extent the Fund invests in the stocks of smaller-sized companies, the Fund may be subject to additional risks, including the risk that earnings and prospects of these companies are more volatile than larger companies. Smaller-sized companies may experience higher failure rates than larger companies and normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures.

Tax Risk. Certain of the Fund's investment strategies, including transactions in futures, may be subject to special tax rules, the effect of which may have adverse tax consequences for the Fund. By investing in commodities indirectly through the Subsidiary, the Fund intends to obtain exposure to the commodities markets within the U.S. federal tax requirements that apply to the Fund. However, because the Subsidiary is a controlled foreign corporation, any income received from its investments will be passed through to the Fund as ordinary income, which may be taxed at less favorable rates than capital gains. The Subsidiary declares and distributes a dividend to the Fund, no less than annually, as the sole shareholder of the Subsidiary, in an amount approximately equal to the total amount of "Subpart F" income (as defined in Section 951 of the Internal Revenue Code of 1986, as amended) generated by or expected to be generated by the Subsidiary's investments during the fiscal year. If the Subsidiary were to fail to make sufficient dividend distributions to the Fund, all or a portion of the income from the Fund's investment in the Subsidiary might not be qualifying income, and the Fund might not qualify as a regulated investment company for one or more years.

Turnover Risk. The Fund may have high portfolio turnover rates. Increased portfolio turnover causes the Fund to incur higher brokerage costs, which may adversely affect the Fund's performance and may produce increased taxable distributions.

Underlying Fund Risk. Because the Fund may invest in other investment companies, the value of your investment will fluctuate in response to the performance of the underlying funds. Investing in underlying funds involves certain additional expenses and certain tax results that would not arise if you invested directly in the underlying funds. By investing in underlying funds, you will bear not only your proportionate share of the Fund's expenses (including operating costs and investment advisory and administrative fees), but also, indirectly, similar expenses and charges of the underlying funds, including any contingent deferred sales charges and redemption charges. Finally, you may incur increased tax liabilities by investing in the Fund rather than directly in the underlying funds. Each underlying fund is subject to specific risks, depending on the nature of its investment strategy, including liquidity risk and default risk on the assets held by the underlying fund.

U.S. Government Obligations Risk. U.S. Treasury obligations are backed by the “full faith and credit” of the U.S. government and generally have negligible credit risk. Securities issued or guaranteed by federal agencies or authorities and U.S. government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. government.

Volatility Risk. Significant short-term price movements could adversely impact the performance of the Fund.

Wholly-Owned Subsidiary Risk. By investing in the Subsidiary, the Fund is indirectly exposed to the commodities risks associated with the Subsidiary’s investments in commodity-related instruments. Shareholders of the Fund are indirectly subject to the principal risks of the Subsidiary by virtue of the Fund’s investment in the Subsidiary. There can be no assurance that the Subsidiary’s investments will contribute to the Fund’s returns. The Subsidiary is not registered under the Investment Company Act of 1940, as amended, and is not subject to all the investor protections of the act. Changes in the laws of the United States and/or the Cayman Islands could result in the inability of the Fund and/or the Subsidiary to operate as described in this Prospectus and could adversely affect the Fund, such as by reducing the Fund’s investment returns. The Fund and the Subsidiary are “commodity pools” under the U.S. Commodity Exchange Act, and the Advisor is a “commodity pool operator” registered with and regulated by the Commodity Futures Trading Commission (“CFTC”). As a result, additional CFTC-mandated disclosure, reporting and recordkeeping obligations apply with respect to the Fund and the Subsidiary and subject each to CFTC penalties if reporting was found to be deficient.

Performance:

Because the Fund is a new fund and does not yet have a full calendar year of investment operations, no performance information is presented for the Fund at this time. In the future, performance information will be presented in this section of this Prospectus. Updated performance information will be available at no cost by calling 1-866-447-4228 and on the Fund’s website at www.CatalystMF.com.

Advisor: Catalyst Capital Advisors LLC is the Fund’s investment advisor.

Sub-Advisor: Aspect Capital Limited serves as the Fund’s sub-advisor.

Portfolio Managers: The Fund’s portfolio is managed by a team consisting of: Anthony Todd, Chief Executive Officer of the Sub-Advisor; Martin Lueck, Research Director of the Sub-Advisor; Christopher Reeve, Director of Risk of the Sub-Advisor; and Max Xu, Portfolio Manager of the Sub-Advisor (collectively, the “Investment Committee”). Each member of the Investment Committee has been primarily and jointly responsible for the day-to-day management of the Fund since its inception in December 2023.

Purchase and Sale of Fund Shares: The minimum initial investment in all share classes of the Fund is \$2,500 for regular and IRA accounts, and \$100 for an automatic investment plan account. The minimum subsequent investment in all share classes of the Fund is \$50. You may purchase and redeem shares of the Fund on any day that the New York Stock Exchange is open. Redemption requests may be made in writing, by telephone or through a financial intermediary to the Fund or the Transfer Agent and will be paid by check or wire transfer.

Tax Information: Dividends and capital gain distributions you receive from the Fund, whether you reinvest your distributions in additional Fund shares or receive them in cash, are taxable to you at either ordinary income or capital gains tax rates unless you are investing through a tax-deferred plan such as an IRA or 401(k) plan. If you are investing in a tax-deferred plan, distributions may be taxable upon withdrawal from the plan.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
