March 26, 2020

The following information supplements certain information contained in each currently effective Prospectus for each Fund dated on or before the date of this Supplement and should be read in conjunction with any such Prospectus.

The section of the Funds’ Prospectus entitled “ADDITIONAL INFORMATION ABOUT THE FUNDS’ PRINCIPAL INVESTMENT STRATEGIES AND RELATED RISKS - Principal and Non-Principal Investment Risks – Market Risk” is replaced with the following:

Market Risk. Overall market risks may also affect the value of the Fund. The market values of securities or other investments owned by the Fund will go up or down, sometimes rapidly or unpredictably. Factors such as economic growth and market conditions, interest rate levels, exchange rates and political events affect the securities markets. Changes in market conditions and

interest rates generally do not have the same impact on all types of securities and instruments. Unexpected local, regional or global events and their aftermath, such as war; acts of terrorism; financial, political or social disruptions; natural, environmental or man-made disasters; the spread of infectious illnesses or other public health issues; recessions and depressions; or other tragedies, catastrophes and events could have a significant impact on the Fund and its investments and could result in increased premiums or discounts to the Fund's net asset value, and may impair market liquidity, thereby increasing liquidity risk. Such events can cause investor fear and panic, which can adversely affect the economies of many companies, sectors, nations, regions and the market in general, in ways that cannot necessarily be foreseen. The Fund could lose money over short periods due to short-term market movements and over longer periods during more prolonged market downturns. During a general market downturn, multiple asset classes may be negatively affected. In times of severe market disruptions you could lose your entire investment.

An outbreak of infectious respiratory illness caused by a novel coronavirus known as COVID-19 was first detected in China in December 2019 and subsequently spread globally. This coronavirus has resulted in, among other things, travel restrictions, closed international borders, enhanced health screenings at ports of entry and elsewhere, disruption of and delays in healthcare service preparation and delivery, prolonged quarantines, significant disruptions to business operations, market closures, cancellations and restrictions, supply chain disruptions, lower consumer demand, and significant volatility and declines in global financial markets, as well as general concern and uncertainty. The impact of COVID-19 has adversely affected, and other infectious illness outbreaks that may arise in the future could adversely affect, the economies of many nations and the entire global economy, individual issuers and capital markets in ways that cannot necessarily be foreseen. In addition, the impact of infectious illnesses in emerging market countries may be greater due to generally less established healthcare systems. Public health crises caused by the COVID-19 outbreak may exacerbate other pre-existing political, social and economic risks in certain countries or globally. The duration of the COVID-19 outbreak and its effects cannot be determined with certainty.

PROSPECTUS
December 25, 2019

This Prospectus provides important information about the Fund that you should know before investing. Please read it carefully and keep it for future reference.

Neither the Securities and Exchange Commission nor the Commodity Trading Futures Commission have approved or disapproved these securities or determined if this Prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

Beginning January 1, 2021, the Fund intends to meet its shareholder report delivery obligations by posting annual and semi-annual shareholder reports to the Fund's website, www.CatalystMF.com rather than delivering paper copies. You will be notified by mail each time a report is posted and provided with the website link to access the report. You may elect to receive paper copies of a specific shareholder report or all future shareholder reports free of charge by contacting your financial intermediary (such as a broker-dealer or bank) or, if you are a direct investor, by calling the Fund at 1-866-447-4228. Your election to receive reports in paper will apply to all funds held within the fund complex.

You may elect to receive shareholder reports and other communications from the Fund or your financial intermediary electronically by contacting your financial intermediary or, if you are a direct shareholder, by calling the Fund at 1-866-447-4228. If you already elected to receive shareholder reports electronically, you will not be affected by this change and you do not need to do anything.

FUND SUMMARY: CATALYST/TEZA ALGORITHMIC ALLOCATION INCOME FUND

Investment Objective: The Fund’s investment objective is to seek long-term capital appreciation and current income.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund. You may qualify for sales charge discounts on purchases of Class A shares if you and your family invest, or agree to invest in the future, at least \$50,000 in the Fund. More information about these and other discounts is available from your financial professional and is included in the section of the Fund’s prospectus entitled **How to Buy Shares** on page 44 and **Appendix A – Intermediary-Specific Sales Charge Reductions and Waivers** and in the sections of the Fund’s Statement of Additional Information entitled **Reduction of Up-Front Sales Charge on Class A Shares** on page 44 and **Waivers of Up-Front Sales Charge on Class A Shares** on page 45.

Shareholder Fees (fees paid directly from your investment)	Class A	Class C	Class I
Maximum Sales Charge (Load) Imposed on Purchases (as a % of offering price)	5.75%	None	None
Maximum Deferred Sales Charge (Load) (as a % of the original purchase price)	1.00%	None	None
Maximum Sales Charge (Load) Imposed on Reinvested Dividends and other Distributions	None	None	None
Redemption Fee	None	None	None
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)			
Management Fees	1.90%	1.90%	1.90%
Distribution and/or Service (12b-1) Fees	0.25%	1.00%	None
Other Expenses¹	0.82%	0.82%	0.82%
Total Annual Fund Operating Expenses¹	2.97%	3.72%	2.72%
Fee Waiver and/or Expense Reimbursement^{1,2}	(0.73)%	(0.73)%	(0.73)%
Total Annual Fund Operating Expenses After Fee Waiver and/or Expense Reimbursement²	2.24%	2.99%	1.99%

¹ Estimated for the current fiscal year.

²The Advisor has contractually agreed to waive fees and/or reimburse expenses of the Fund to the extent necessary to limit total annual fund operating expenses (excluding brokerage costs; borrowing costs such as (a) interest and (b) dividends on securities sold short; taxes; underlying fund expenses; and extraordinary expenses, such as regulatory inquiry and litigation expenses) at 2.24%, 2.99% and 1.99% for Class A shares, Class C shares and Class I shares, respectively, through October 31, 2021. This agreement may only be terminated by the Board of Trustees on 60 days’ written notice to the Advisor and upon the termination of the Management Agreement between the Trust and the Advisor. Fee waivers and expense reimbursements are subject to possible recoupment by the Advisor from the Fund in future years on a rolling three-year basis (within the three years after the fees have been waived or reimbursed) so long as such recoupment does not cause the Fund’s expense ratio (after the repayment is taken into account) to exceed either: (i) the Fund’s expense limitation at the time such expenses were waived or (ii) the Fund’s current expense limitation at the time of recoupment.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then hold or redeem all of your shares at the end of those periods. The Example reflects the fee waiver and expense reimbursement for the duration of the

waiver/reimbursement period only. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

<u>YEAR</u>	<u>Class A</u>	<u>Class C</u>	<u>Class I</u>
1	\$789	\$302	\$202
3	\$1,376	\$1,071	\$775

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. Because the Fund has not commenced operations as of the date of this prospectus, the portfolio turnover rate for the last fiscal year is not available. In the future, the portfolio turnover rate for the most recent fiscal year will be provided here.

Principal Investment Strategies:

The Fund provides exposure to major global asset classes, including equity indexes, government bond interest rates and commodities, including energy, precious metals, base metals, agriculturals and grains. The Fund gains exposure to these asset classes by investing directly or indirectly through its Subsidiary (as described below) in futures contracts. Investments by the Fund may be made in domestic and foreign markets, including emerging markets. The Fund also holds a large portion of its assets in cash or other cash equivalents, money market mutual funds and other fixed income investments, some or all of which will serve as margin or collateral for the Fund’s investments. Other fixed income investments include investment grade short- and mid-term fixed income securities, including U.S. government securities, corporate bonds and ETFs that provide exposure to investment-grade fixed income securities.

The Fund will hold both long and short positions. The Fund’s sub-advisor, Teza Capital Management LLC (the “Sub-Advisor”), uses a quantitative and systematic trading strategy based on algorithmic machine learning technology to manage the Fund. The Fund generally holds long positions in equity index and government bond interest rate futures to achieve its long-term target risk exposure. However, based on proprietary risk-scaling tools and in response to market conditions, the strategy can dynamically reduce the Fund’s exposure to equity index and government bond interest rate futures. The commodities portion of the strategy invests in long or short positions in commodities futures contracts.

The Sub-Advisor’s trading strategy rebalances the Fund’s positions and risk exposure, generally on a daily basis in response to certain market conditions, such as strong positive correlation between stocks and bonds or changes in that correlation. The strategy dynamically scales back the overall risk exposure of the portfolio based upon the quantitative analysis of contemporaneous asset class correlations derived from pricing data collected by the Sub-Advisor. The Fund’s strategy is intended as improvement upon static risk models which are rebalanced less frequently and, as a result, may deliver less consistent levels of risk exposure.

Target Volatility: The Fund is actively managed to a target range of 9 to 12% annualized volatility, although there is no guarantee that this goal can be met in all market conditions. There is no guarantee that the Fund will successfully achieve or maintain the target volatility level. Volatility is a statistical measure of the magnitude of changes in the Fund's returns without regard to the direction of the returns. The Fund's actual volatility level for longer or shorter periods may be materially higher or lower than the target level depending on market conditions, and therefore the Fund's risk exposure may be materially higher or lower than the level targeted by the Sub-Advisor. As portfolio weights and estimates of volatility and correlations change through time, the Sub-Advisor will increase and decrease the Fund's gross exposure to underlying assets in order to maintain its target level of portfolio volatility. During periods of extremely high volatility and high correlations, the Fund may have lower exposure to underlying assets to maintain the target level of portfolio volatility. Conversely, during periods of low volatility and low correlations the Fund may require greater exposure to underlying assets to maintain its target level of portfolio volatility.

The Fund's target volatility level is not a total return performance target – the Fund does not expect, nor does it represent, that its total return performance will be within any specified range. It is possible that the Fund could achieve its target volatility level while having negative performance returns. Also, efforts to achieve and maintain a target volatility level can be expected to limit the Fund's gains in rising markets, may expose the Fund to costs to which it would otherwise not have been exposed and, if unsuccessful, may result in substantial losses.

The Fund actively trades its portfolio investments, which may lead to higher transaction costs that may affect the Fund's performance.

The Fund is classified as “non-diversified” for purposes of the Investment Company Act of 1940 (the “1940 Act”), which means a relatively high percentage of the Fund's assets may be invested in the securities of a limited number of companies that could be in the same or related economic sectors.

Investments in Subsidiary. The Advisor executes a portion of the Fund's strategy by investing up to 25% of its total assets in a wholly-owned and controlled subsidiary (the "Subsidiary"). The Subsidiary invests the majority of its assets in commodities and other futures contracts. The Subsidiary is subject to the same investment restrictions as the Fund, when viewed on a consolidated basis. The Advisor and Sub-Advisor to the Fund are also Advisor and Sub-Advisor to the Subsidiary.

Principal Risks of Investing in the Fund

As with any mutual fund, there is no guarantee that the Fund will achieve its objective. Investment markets are unpredictable and there will be certain market conditions where the Fund will not meet its investment objective and will lose money. The Fund's net asset value and returns will vary and you could lose money on your investment in the Fund and those losses could be significant.

The following summarizes the principal risks of investing in the Fund. These risks could adversely affect the net asset value, total return and the value of the Fund and your investment.

Acquired Fund Risk. Because the Fund may invest in other investment companies, the value of your investment will fluctuate in response to the performance of the acquired funds. Investing in acquired funds involves certain additional expenses and certain tax results that would not arise if you invested directly in the securities of the acquired funds.

Cash or Cash Equivalents Risk: At any time, the Fund may have significant investments in cash or cash equivalents. When a substantial portion of a portfolio is held in cash or cash equivalents, there is the risk that the value of the cash account, including interest, will not keep pace with inflation, thus reducing purchasing power over time.

Commodity Risk: Investing in the commodities markets may subject the Fund to greater volatility than investments in traditional securities. Commodity prices may be influenced by unfavorable weather, animal and plant disease, geologic and environmental factors as well as changes in government regulation such as tariffs, embargoes or burdensome production rules and restrictions.

Counterparty Risk. Counterparty risk is the risk that a counterparty to a financial instrument held by the Fund or by a special purpose or structured vehicle invested in by the Fund may become insolvent or otherwise fail to perform its obligations, and the Fund may obtain no or limited recovery of its investment, and any recovery may be significantly delayed.

Credit Risk. Credit risk is the risk that an issuer of a security will fail to pay principal and interest in a timely manner, reducing the Fund's total return. Credit risk may be substantial for the Fund. The price of a fixed income security tends to drop if the rating of the underlying issuer drops and the probability of the failure to pay principal and interest increases.

Derivatives Risk: Even a small investment in derivatives (i.e., futures) may give rise to leverage risk (which can increase volatility and magnify the Fund's potential for loss), counterparty risk (the risk that a counterparty (the other party to a transaction or an agreement or the party with whom the Fund executes transactions) to a transaction with the Fund may be unable or unwilling to make timely principal, interest or settlement payments), and can have a significant impact on the Fund's performance. Derivatives are also subject to credit risk (the counterparty may default) and liquidity risk (the Fund may not be able to sell the security or otherwise exit the contract in a timely manner).

Emerging Market Risk: Emerging market countries may have relatively unstable governments, weaker economies, and less-developed legal systems with fewer security holder rights. Emerging market economies may be based on only a few industries and security issuers may be more susceptible to economic weakness and more likely to default. Emerging market securities also tend to be less liquid.

Equity Risk. Equity securities are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. Investor perceptions are based on various and unpredictable factors, including expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction and global or regional political, economic and banking crises.

ETFs Risk. Like an open-end investment company (mutual fund), the value of an ETF can

fluctuate based on the prices of the securities owned by the ETF, and ETFs are also subject to the following additional risks: (i) the ETF's market price may be less than its net asset value; (ii) an active market for the ETF may not develop; and (iii) market trading in the ETF may be halted under certain circumstances.

Fixed-Income Risk. When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities.

The Fund may have exposure to LIBOR-linked investments and anticipates that LIBOR will be phased out by the end of 2021. While some instruments may contemplate a scenario where LIBOR is no longer available by providing for an alternative rate setting methodology, not all instruments may have such provisions and there is significant uncertainty regarding the effectiveness of any such alternative methodologies and potential for short-term and long-term market instability. Because of the uncertainty regarding the nature of any replacement rate, the Fund cannot reasonably estimate the impact of the anticipated transition away from LIBOR at this time. If the LIBOR replacement rate is lower than market expectations, there could be an adverse impact on the value of preferred and debt securities with floating or fixed-to-floating rate coupons.

Other risk factors include credit risk (the debtor may default) and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.

Foreign Currency Risk: Currency trading risks include market risk, credit risk and country risk. Market risk results from adverse changes in exchange rates in the currencies the Fund is long or short. Credit risk results because a currency-trade counterparty may default. Country risk arises because a government may interfere with transactions in its currency.

Foreign Exchanges Risk: A portion of the derivatives trades made by the Fund may take place on foreign markets. Neither existing CFTC regulations nor regulations of any other U.S. governmental agency apply to transactions on foreign markets. Some of these foreign markets, in contrast to U.S. exchanges, are so-called principals' markets in which performance is the responsibility only of the individual counterparty with whom the trader has entered into a commodity interest transaction and not of the exchange or clearing corporation. In these kinds of markets, there is risk of bankruptcy or other failure or refusal to perform by the counterparty.

Foreign Investment Risk: Foreign investing involves risks not typically associated with U.S. investments, including adverse fluctuations in foreign currency values, adverse political, social and economic developments, less liquidity, greater volatility, less developed or less efficient trading markets, political instability and differing auditing and legal standards. Investing in emerging markets imposes risks different from, or greater than, risks of investing in foreign developed countries.

Futures Contract Risk: The successful use of futures contracts draws upon the Sub-Advisor's skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Advisor's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Index Risk. If the derivative is linked to the performance of an index, it will be subject to the risks associated with changes in that index.

Interest Rate Risk. Changes in short-term market interest rates will directly affect the yield on the shares of a fund whose investments are normally invested in floating rate debt. If short-term market interest rates fall, the yield on the Fund's shares will also fall. Conversely, when short-term market interest rates rise, because of the lag between changes in such short-term rates and the resetting of the floating rates on the floating rate debt in the Fund's portfolio, the impact of rising rates will be delayed to the extent of such lag.

Leverage Risk: Using derivatives to increase the Fund's combined long and short exposure creates leverage, which can magnify the Fund's potential for gain or loss and, therefore, amplify the effects of market volatility on the Fund's share price.

Limited History of Operations Risk: The Fund is a new fund and has a limited history of operations for investors to evaluate. Investors in the Fund bear the risk that the Fund may not be successful in implementing its investment strategies, may be unable to implement certain of its investment strategies or may fail to attract sufficient assets, any of which could result in the Fund being liquidated and terminated at any time without shareholder approval and at a time that may not be favorable for all shareholders. Such a liquidation could have negative tax consequences for shareholders and will cause shareholders to incur expenses of liquidation.

Management Risk: The Advisor's or Sub-Advisor's judgments about the attractiveness, value and potential appreciation of particular asset classes and securities in which the Fund invests may prove to be incorrect and may not produce the desired results.

Managed Volatility Risk: Techniques used by the Sub-Advisor to manage the volatility of the Fund's investments carry the risks that such techniques may not protect against market declines. The techniques may also limit the Fund's participation in market gains, particularly during periods where market values are increasing but market volatility is high. Further, such techniques may increase portfolio transaction costs, which could result in losses or reduced gains. They also may not be successful as the techniques are subject to the Sub-Advisor's ability to correctly analyze and implement the volatility management techniques in a timely manner.

Market Risk: Overall securities and derivatives market risks may affect the value of individual instruments in which the Fund invests. Factors such as domestic and foreign economic growth and market conditions, interest rate levels, and political events affect the securities and derivatives markets. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Model and Data Risk. Like all quantitative analysis, the investment models utilized by the Sub-Advisor carry the risk that the ranking system, valuation results and predictions might be based on one or more incorrect assumptions, insufficient historical data, inadequate design, or may not be suitable for the purpose intended. In addition, models may not perform as intended for many reasons including errors, omissions, imperfections or malfunctions. Because such models are usually based on data supplied by third parties, the success of the Sub-Advisor's use of such models is dependent on the accuracy and reliability of the supplied data. Historical data inputs may be subject to revision or corrections, which may diminish data reliability and quality of predictive results. Changing and unforeseen market dynamics could also lead to a decrease in the short-term or long-term effectiveness of a model. Models may lose their predictive validity and incorrectly forecast future market behavior and asset prices, leading to potential losses. No assurance can be given that a model will be successful under all or any market conditions.

Non-Diversification Risk. Because a relatively high percentage of the Fund's assets may be invested in the securities of a limited number of companies that could be in the same or related economic sectors, the Fund's portfolio may be more susceptible to any single economic, technological or regulatory occurrence than the portfolio of a diversified fund.

Regulatory Risk. Changes in the laws or regulations of the United States or other countries, including any changes to applicable tax laws and regulations, could impair the ability of the Fund to achieve its investment objective and could increase the operating expenses of the Fund.

Risk Management Risk. The measures that the Sub-Advisor use to monitor and manage the risks of the Fund may not accomplish the intended results and the Fund may experience losses significantly greater than expected.

Security Risk. The value of the Fund may decrease in response to the activities and financial prospects of an individual security in the Fund's portfolio.

Turnover Rate Risk: The Fund may have a high turnover of the securities held in its portfolio. Increased portfolio turnover causes the Fund to incur higher brokerage costs, which may adversely affect the Fund's performance and may produce increased taxable distributions.

U.S. Agency Securities Risk. Securities issued or guaranteed by federal agencies or authorities and U.S. government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. government. The Fund may be subject to such risk to the extent it invests in securities issued or guaranteed by federal agencies or authorities and U.S. government sponsored instrumentalities or enterprises.

Wholly-Owned Subsidiary Risk: The Subsidiary will not be registered under the 1940 Act and, unless otherwise noted in this Prospectus, will not be subject to all of the investor protections of

the 1940 Act. Changes in the laws of the United States and/or the Cayman Islands, under which the Fund and the Subsidiary, respectively, are organized, could result in the inability of the Fund and/or Subsidiary to operate as described in this Prospectus and could negatively affect the Fund and its shareholders. Your cost of investing in the Fund will be higher because you indirectly bear the expenses of the Subsidiary. Shareholders of the Fund will indirectly be subject to the principal risks of the Subsidiary by virtue of the Fund's investment in the Subsidiary. The Fund and the Subsidiary are "commodity pools" under the U.S. Commodity Exchange Act, and the Adviser is a "commodity pool operator" registered with and regulated by the Commodity Futures Trading Commission ("CFTC"). As a result, additional CFTC-mandated disclosure, reporting and recordkeeping obligations apply with respect to the Fund and the Subsidiary and may increase their expenses and subject each to CFTC penalties if reporting was found to be deficient. By investing in commodities indirectly through the Subsidiary, the Fund will obtain exposure to the commodities markets within the federal tax requirements that apply to the Fund. However, because the Subsidiary is a controlled foreign corporation, any income received from its investments will be passed through to the Fund as ordinary income, which may be taxed at less favorable rates than capital gains.

Performance:

Because the Fund is a new fund and does not yet have a full calendar year of investment operations, no performance information is presented for the Fund at this time. In the future, performance information will be presented in this section of this Prospectus. Updated performance information and daily net asset value will be available at no cost by calling 1-866-447-4228.

Advisor: Catalyst Capital Advisors LLC is the Fund's investment advisor.

Sub-Advisor: Teza Capital Management LLC is the Fund's investment sub-advisor.

Portfolio Managers: Dr. Mikhail Malyshev, Chief Executive Officer of the Sub-Advisor, and Dr. Reinhold Gebert, Chief Operating Officer and Chief Risk Officer of the Sub-Advisor, are the Fund's portfolio managers and are jointly and primarily responsible for the day-to-day management of the Fund's portfolio. They have served the Fund in this capacity since the Fund commenced operations in December 2019.

Purchase and Sale of Fund Shares: The minimum initial investment in each share class of the Fund is \$2,500 for a regular account, \$2,500 for an IRA account, or \$100 for an automatic investment plan account. The minimum subsequent investment in the Fund is \$50. You may purchase and redeem shares of the Fund on any day that the New York Stock Exchange is open. Redemption requests may be made in writing, by telephone or through a financial intermediary to the Fund or the Transfer Agent and will be paid by check or wire transfer.

Tax Information: Dividends and capital gain distributions you receive from the Fund, whether you reinvest your distributions in additional Fund shares or receive them in cash, are taxable to you at either ordinary income or capital gains tax rates unless you are investing through a tax-deferred plan such as an IRA or 401(k) plan. If you are investing in a tax-deferred plan, distributions may be taxable upon withdrawal from the plan.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUND’S PRINCIPAL INVESTMENT STRATEGIES AND RELATED RISKS

INVESTMENT OBJECTIVE

The investment objective of the Fund is non-fundamental and may be changed by the Board of Trustees (“Board” or “Trustees”) without shareholder approval. If the Board decides to change a Fund’s investment objective, shareholders will be given 60 days’ advance notice.

Fund	Investment Objective
Catalyst/Teza Algorithmic Allocation Income Fund	The Fund’s investment objective is long-term capital appreciation and current income.

PRINCIPAL INVESTMENT STRATEGIES

The Fund’s main investment strategies summarized in the Summary Section for the Fund and discussed below are the strategies that the Advisor believes are most likely to be important in trying to achieve the Fund’s investment objective. You should note, however, that the Fund may use other non-principal strategies and invest in other securities not described in this prospectus, which are disclosed in detail in the Fund’s Statement of Additional Information (“SAI”). For a copy of the SAI please call toll free at 1-866-447-4228 or visit the Fund’s website at www.CatalystMF.com.

Catalyst/Teza Algorithmic Allocation Income Fund

The Fund provides exposure to major global asset classes, including equity indexes, government bond interest rates and commodities, including energy, precious metals, base metals, agriculturals and grains. The Fund gains exposure to these asset classes by investing directly or indirectly through its Subsidiary (as described below) in futures contracts. Investments by the Fund may be made in domestic and foreign markets, including emerging markets. The Fund holds a large portion of its assets in cash or other cash equivalents, money market mutual funds and other fixed income investments, some or all of which will serve as margin or collateral for the Fund’s investments. Other fixed income investments include investment grade short- and mid-term fixed income securities, including U.S. government securities, corporate bonds and ETFs that provide exposure to investment-grade fixed income securities.

The Fund will hold both long and short positions, although the Fund’s holdings are generally expected to be long-biased. The Fund’s sub-advisor, Teza Capital Management LLC (the “Sub-Advisor”), uses a quantitative and systematic trading strategy. The Sub-Advisor developed the

strategy using a scientific and process-oriented approach to analyzing market information and risk metrics. This approach included the testing and back-testing of hypotheses about relevant market factors, signals and statistical techniques, proposed models, algorithms and risk management methodologies, among other factors. The strategy follows a systematic investment process, utilizing algorithmic machine learning technology and executing trades based on the price of the relevant underlying instruments as well as on other fundamental (non-price) and proprietary quantitative signals.

The Fund generally holds long positions in equity index and government bond interest rate futures to achieve its long-term target risk exposure. However, based on proprietary risk-scaling tools and in response to market conditions, the strategy can dynamically reduce the Fund's exposure to stock index and government bond interest rate futures. The commodities portion of the strategy invests in long or short positions in commodities futures contracts.

The Sub-Advisor's trading strategy rebalances the Fund's positions and risk exposure, generally on a daily basis, in response to certain market conditions, such as strong positive correlation between stocks and bonds or changes in that correlation. The strategy dynamically scales back the overall risk exposure of the portfolio. These adjustments are based upon the quantitative analysis of contemporaneous asset class correlations derived from pricing data collected by the Sub-Advisor. The Fund's strategy is intended as improvement upon static risk models, which are rebalanced less frequently and, as a result, may deliver less consistent levels of risk exposure.

Target Volatility: The Fund is actively managed to target a range of 9 to 12% annualized volatility, although there is no guarantee that this goal can be met in all market conditions. There is no guarantee that the Fund will successfully achieve or maintain the target volatility level. Volatility is a statistical measure of the magnitude of changes in the Fund's returns without regard to the direction of the returns. The Fund's actual volatility level for longer or shorter periods may be materially higher or lower than the target level depending on market conditions, and therefore the Fund's risk exposure may be materially higher or lower than the level targeted by the Sub-Advisor. As portfolio weights and estimates of volatility and correlations change through time, the Sub-Advisor will increase and decrease the Fund's gross exposure to underlying assets in order to maintain its target level of portfolio volatility. During periods of extremely high volatility and high correlations, the Fund may have lower exposure to underlying assets to maintain the target level of portfolio volatility. Conversely, during periods of low volatility and low correlations the Fund may require greater exposure to underlying assets to maintain its target level of portfolio volatility.

The Fund's target volatility level is not a total return performance target – the Fund does not expect, nor does it represent, that its total return performance will be within any specified range. It is possible that the Fund could achieve its target volatility level while having negative performance returns. Also, efforts to achieve and maintain a target volatility level can be expected to limit the Fund's gains in rising markets, may expose the Fund to costs to which it would otherwise not have been exposed and, if unsuccessful, may result in substantial losses.

The Fund actively trades its portfolio investments, which may lead to higher transaction costs that may affect the Fund's performance.

The Fund is classified as “non-diversified” for purposes of the Investment Company Act of 1940 (the “1940 Act”), which means a relatively high percentage of the Fund’s assets may be invested in the securities of a limited number of companies that could be in the same or related economic sectors.

Subsidiary

The Fund executes a portion of its strategy by investing up to 25% of its total assets in a wholly-owned and controlled Subsidiary. The Subsidiary invests the majority of its assets in commodities and other futures contracts subject to the same investment restrictions as the Fund, when viewed on a consolidated basis. The principal investment strategies and principal investment risks of the Subsidiary are also principal investment strategies and principal risks of the Fund and are reflected in this Prospectus. The financial statements of the Subsidiary are consolidated with those of the Fund. By investing in commodities indirectly through the Subsidiary, the Fund obtains exposure to the commodities markets within the federal tax requirements that apply to the Fund. Specifically, the Subsidiary provides the Fund with exposure to the commodities markets within the limitations of the federal tax requirements of Subchapter M of the Internal Revenue Code of 1986, as amended (the "Code"). Sub-chapter M requires, among other things, that at least 90% of the Fund's income be derived from securities or derived with respect to its business of investing in securities (typically referred to as "qualifying income"). The Fund will make investments in certain commodity-linked derivatives through the Subsidiary because income from these derivatives is not treated as "qualifying income" for purposes of the 90% income requirement if the Fund invests in the derivative directly.

The Internal Revenue Service has issued a number of private letter rulings to other mutual funds (unrelated to the Fund), which indicate that certain income from a fund's investment in a wholly-owned foreign subsidiary will constitute "qualifying income" for purposes of Subchapter M. The Fund does not have a private letter ruling. To satisfy the 90% income requirement, the Subsidiary will, no less than annually, declare and distribute a dividend to the Fund, as the sole shareholder of the Subsidiary, in an amount approximately equal to the total amount of "Subpart F" income (as defined in Section 951 of the Code) generated by or expected to be generated by the Subsidiary's investments during the fiscal year. Such dividend distributions are "qualifying income" pursuant to Subchapter M (Section 851(b)) of the Code.

Because the Fund may invest a substantial portion of its assets in the Subsidiary, which may hold some of the investments described in this Prospectus, the Fund may be considered to be investing indirectly in some of those investments through its Subsidiary. For that reason, references to the Fund may also include the Subsidiary.

The Subsidiary follows the same compliance policies and procedures, as the Fund and is subject to the same investment restrictions and limitations as the Fund when measured on a consolidated basis with the Fund. The Fund complies with the provisions of the 1940 Act governing investment policies, capital structure and leverage on an aggregate basis with the Subsidiary. In addition, the Subsidiary complies with the provisions of the 1940 Act relating to affiliated transactions and custody. The Fund’s custodian also serves as the custodian to the Subsidiary.

Investment advisers to the Subsidiary also comply with the provisions of the 1940 Act regarding investment advisory contracts and are considered to be investment adviser to the Fund under the 1940 Act.

Temporary Defensive Positions

From time to time, the Fund may take temporary defensive positions, which are inconsistent with the Fund’s principal investment strategies, in attempting to respond to adverse market, economic, political, or other conditions. For example, the Fund may hold all or a portion of its assets in money market instruments, including cash, cash equivalents, U.S. government securities, other investment grade fixed income securities, certificates of deposit, bankers acceptances, commercial paper, money market funds and repurchase agreements. While the Fund is in a defensive position, the opportunity to achieve its investment objective will be limited. If the Fund invests in a money market fund, the shareholders of the Fund generally will be subject to duplicative management fees. Although the Fund would do this only in seeking to avoid losses, the Fund will be unable to pursue its investment objective during that time, and it could reduce the benefit from any upswing in the market.

Manager-of-Managers Order

The Trust and the Advisor have obtained an exemptive order (the “Order”) from the SEC that permits the Advisor, with the Board’s approval, to enter into sub-advisory agreements with one or more sub-advisors without obtaining shareholder approval. The Order permits the Advisor, subject to the approval of the Board, to replace sub-advisors or amend sub-advisory agreements, including fees, without shareholder approval whenever the Advisor and the Board believe such action will benefit the Fund and its shareholders.

NON-PRINCIPAL INVESTMENT STRATEGY

In addition to the principal investment strategies discussed above, the Fund may invest in other investment companies, including affiliated funds advised by the Advisor.

PRINCIPAL AND NON-PRINCIPAL INVESTMENT RISKS

All mutual funds carry a certain amount of risk. As with any mutual fund, there is no guarantee that a Fund will achieve its objective. Investment markets are unpredictable and there will be certain market conditions where the Fund will not meet its investment objective and will lose money. The Fund’s net asset value and returns will vary and you could lose money on your investment in the Fund and those losses could be significant. An investment in the Fund is not a complete investment program.

The table below identifies the Fund’s principal risks and non-principal risks.

Key:

Principal Risk: ●

Non-Principal Risk: ○

Acquired Fund Risk	●
--------------------	---

Acquired Funds Risk. Because the Fund may invest in other investment companies, the value of your investment will fluctuate in response to the performance of the acquired funds. Investing in acquired funds involves certain additional expenses and certain tax results that would not arise if you invested directly in the acquired funds. By investing in acquired funds, you will bear not only your proportionate share of the Fund’s expenses (including operating costs and investment advisory and administrative fees), but also, indirectly, similar expenses and charges of the acquired funds, including any contingent deferred sales charges and redemption charges. Finally, you may incur increased tax liabilities by investing in the Funds rather than directly in the acquired funds.

ETF shares may trade at a discount to or a premium above net asset value if there is a limited market in such shares. ETFs are also subject to brokerage and other trading costs, which could result in greater expenses to the Fund. Because the value of ETF shares depends on the demand

in the market, the adviser or sub-adviser (as applicable) may not be able to liquidate the Fund's holding at the most optimal time, adversely affecting performance.

Each acquired fund is subject to specific risks, depending on the nature of its investment strategy. Acquired funds that use derivatives may be subject to counterparty risk, liquidity risk, and other risks commonly associated with investments in derivatives.

ADR Currency Risk. To establish a value for the shares, the issuer establishes a "conversion rate" equal to one share of an ADR for a certain number of shares of the stock of a foreign company. This "conversion rate" establishes a universal monetary relationship between the value of the ADR and the local currency of the foreign company stock. Although an ADR is priced in the US dollar, in order to preserve the uniformity of the established "conversion rate," movements in the exchange rate of the local currency versus the US dollar are automatically reflected in the price of the ADR in US dollars. Therefore, even if the price of the foreign security does not change on its market, if the exchange rate of the local currency relative to the US Dollar declines, the ADR price would decline by a similar measure.

Although an ADR is priced in the US dollar, in order to preserve the uniformity of the established "conversion rate," movements in the exchange rate of the local currency versus the US dollar are automatically reflected in the price of the ADR in US dollars. Therefore, even if the price of the foreign security does not change on its market, if the exchange rate of the local currency relative to the US Dollar declines, the ADR price would decline by a similar measure.

ADRs Risk. ADRs, which are typically issued by a bank, are certificates that evidence ownership of shares of a foreign company and are alternatives to purchasing foreign securities directly in their national markets and currencies. ADRs are subject to the same risks as direct investment in foreign companies and involve risks that are not found in investments in U.S. companies. In addition to the risks of investing in foreign securities discussed below, there is no guarantee that an ADR issuer will continue to offer a particular ADR. As a result, the Fund may have difficulty selling the ADR, or selling them quickly and efficiently at the prices at which they have been valued. In a sponsored ADR arrangement, the foreign company assumes the obligation to pay some or all of the depositary's transaction fees. Under an unsponsored ADR arrangement, the foreign company assumes no obligations and the depositary's transaction fees are paid directly by the ADR holders. Because unsponsored ADR arrangements are organized independently and without the cooperation of the foreign company, available information concerning the foreign company may not be as current as for sponsored ADRs and voting rights with respect to the deposited securities are not passed through. ADRs may not track the price of the underlying foreign securities on which they are based, and their value may change materially at times when U.S. markets are not open for trading. Certain ADRs are not listed on an exchange and therefore may be considered to be illiquid.

Affiliated Investment Company Risk. The Fund invests in affiliated underlying funds (the "Catalyst Advised Funds"), unaffiliated underlying funds, or a combination of both. The Advisor, therefore, is subject to conflicts of interest in allocating the Fund's assets among the underlying funds. The Advisor will receive more revenue to the extent it selects a Catalyst Advised Fund rather than an unaffiliated fund for inclusion in the Fund's portfolio. In addition, the Advisor may have an incentive to allocate the Fund's assets to those Catalyst Advised Funds for which the net

advisory fees payable to the Advisor are higher than the fees payable by other Catalyst Advised Funds.

Allocation Risk. The risk that if the Fund’s strategy for allocating assets among different assets classes does not work as intended, the Fund may not achieve its objective or may underperform other funds with the same or similar investment strategy.

Asset-Backed Security Risk. When the Fund invests in asset-backed securities, including mortgage-backed securities and collateralized mortgage obligations (“CMOs”), the Fund is subject to the risk that, if the issuer fails to pay interest or repay principal, the assets backing these securities may not be sufficient to support payments on the securities.

Asset-Backed and Mortgage-Backed Security Risk. Prepayment risk is associated with mortgage-backed and asset-backed securities. If interest rates fall, the underlying debt may be repaid ahead of schedule, reducing the value of the Fund’s investments. If interest rates rise, there may be fewer prepayments, which would cause the average bond maturity to rise, increasing the potential for the Fund to lose money. The value of these securities may be significantly affected by changes in interest rates, the market’s perception of issuers, and the creditworthiness of the parties involved. The ability of the Fund to successfully utilize these instruments may depend on the ability of the Advisor to forecast interest rates and other economic factors correctly. These securities may have a structure that makes their reaction to interest rate changes and other factors difficult to predict, making their value highly volatile. The more senior security classes are generally entitled to receive payment before the subordinate classes if the cash flow generated by the underlying assets is not sufficient to pay all investors. Certain mortgage-backed securities may be secured by pools of mortgages on single-family, multi-family properties, as well as commercial properties. Similarly, asset backed securities may be secured by pools of loans, such as student loans, automobile loans, equipment leases, and credit card receivables. The credit risk on such securities is affected by borrowers or lessees defaulting on their payments. The values of assets underlying mortgage-backed and asset-backed securities may decline and, therefore, may not be adequate to cover underlying investors. Mortgage-backed securities and other securities issued by participants in housing and commercial real estate finance, as well as other real estate-related markets have experienced extraordinary weakness and volatility in certain years. Possible legislation in the area of residential mortgages, credit cards and other loans that may collateralize the securities in which the Fund may invest could negatively impact the value of the Fund’s investments. To the extent the Fund focuses its investments in particular types of mortgage-backed or asset-backed securities, the Fund may be more susceptible to risk factors affecting such types of securities. The liquidity of these assets may decrease over time. The market for non-agency MBS may be smaller and less liquid than the market for government MBS.

Bank Loans Risk. The market for bank loans may not be highly liquid and the Fund may have difficulty selling them. These investments expose the Fund to the credit risk of both the financial institution and the underlying borrower. Bank loans settle on a delayed basis, potentially leading to the sale proceeds of such loans not being available to meet redemptions for a substantial period of time after the sale of the bank loans. Certain bank loans may not be considered “securities,” and purchasers, such as the Fund, therefore may not be entitled to rely on the protections of federal securities laws, including anti-fraud provisions.

Basic Materials Industry Risk. To the extent that the Fund's investments are exposed to issuers conducting business in basic materials, the Fund is subject to the risk that the securities of such issuers will underperform the market as a whole due to legislative or regulatory changes, adverse market conditions and/or increased competition affecting that economic sector. The prices of the securities of basic materials companies also may fluctuate widely in response to such events.

Business Development Companies ("BDC") Risk. BDCs may carry risks similar to those of a private equity or venture capital fund. BDC company securities are not redeemable at the option of the shareholder and they may trade in the market at a discount to their net asset value. A BDC is a form of investment company that is required to invest at least 70% of its total assets in securities (typically debt) of private companies, thinly traded U.S. public companies, or short-term high quality debt securities. The BDCs held by the Fund may leverage their portfolios through borrowings or the issuance of preferred stock. While leverage often serves to increase the yield of a BDC, this leverage also subjects a BDC to increased risks, including the likelihood of increased volatility and the possibility that a BDC's common share income will fall if the dividend rate of the preferred shares or the interest rate on any borrowings rises. A significant portion of a BDC's investments are recorded at fair value as determined by its board of directors which may create uncertainty as to the value of the BDC's investments. Non-traded BDCs are illiquid and it may not be possible to redeem shares or to do so without paying a substantial penalty. Publicly-traded BDCs usually trade at a discount to their net asset value because they invest in unlisted securities and have limited access to capital markets. BDCs are subject to high failure rates among the companies in which they invest and federal securities laws impose restraints upon the organization and operations of BDCs that can limit or negatively impact the performance of a BDC. However, the Fund does not believe it would be liable for the actions of any entity in which it invests and that only its investment is at risk. Also, BDCs may engage in certain principal and joint transactions that a mutual fund or closed-end fund may not without an exemptive order from the SEC.

Call Options Risk. There are risks associated with the sale and purchase of call options. As the seller (writer) of a covered call option, the Fund assumes the risk of a decline in the market price of the underlying security below the purchase price of the underlying security less the premium received, and gives up the opportunity for gain on the underlying security above the exercise option price. The Fund continues to bear the risk that it will lose money if the value of the security falls below the strike price. Option premiums are treated as short-term capital gains and when distributed to shareholders, are usually taxable as ordinary income, which may have a higher tax rate than long-term capital gains for shareholders holding Fund shares in a taxable account. As the buyer of a call option, the Fund assumes the risk that the market price of the underlying security will not increase above the strike price plus the premiums paid, so the Fund bears the risk that it will lose the premium paid for the option.

Capacity Risk. The markets and securities in which the Fund invests may, at times, be limited. Under such conditions, the execution of the Fund's strategy may be affected and the Fund may not achieve its investment objective. In addition, the Fund may not be able to purchase or sell securities at favorable market prices.

Cash or Cash Equivalents Risk: At any time, the Fund may have significant investments in cash or cash equivalents. When a substantial portion of a portfolio is held in cash or cash equivalents,

there is the risk that the value of the cash account, including interest, will not keep pace with inflation, thus reducing purchasing power over time.

CDOs and CLOs Risk. Collateralized debt obligations (“CDOs”) and collateralized loan obligations (“CLOs”) are securities backed by an underlying portfolio of debt and loan obligations, respectively. CDOs and CLOs issue classes or “tranches” that vary in risk and yield and may experience substantial losses due to actual defaults, decrease of market value due to collateral defaults and removal of subordinate tranches, market anticipation of defaults and investor aversion to CDO and CLO securities as a class. The risks of investing in CDOs and CLOs depend largely on the tranche invested in and the type of the underlying debts and loans in the tranche of the CDO or CLO, respectively, in which the Fund invests. CDOs and CLOs also carry risks including, but not limited to, interest rate risk and credit risk.

Changing Fixed Income Market Conditions Risk. Following the financial crisis that began in 2007, the Board of Governors of the Federal Reserve System (the “Federal Reserve”) has attempted to support the U.S. economic recovery by keeping the federal funds rate at a low level and purchasing large quantities of securities issued or guaranteed by the U.S. government, its agencies or instrumentalities on the open market. Any future interest rate increases could cause the value of any fund that invests in fixed income securities to decrease. Federal Reserve policy changes may expose fixed-income and related markets to heightened volatility and may reduce liquidity for certain Fund investments, which could cause the value of the Fund’s investments and share price to decline. If the Fund invests in derivatives tied to fixed-income markets, the Fund may be more substantially exposed to these risks than the Fund that does not invest in derivatives. To the extent the Fund experiences high redemptions because of these policy changes, the Fund may experience increased portfolio turnover, which will increase the costs the Fund incurs and may lower its performance. Furthermore, if rising interest rates cause the Fund to lose enough value, the Fund could also face increased shareholder redemptions, which could force the Fund to liquidate investments at disadvantageous times or prices, therefore adversely affecting the Fund. In addition, decreases in fixed income dealer market-making capacity may persist in the future, potentially leading to decreased liquidity and increased volatility in the fixed income markets.

Collateralized Bond Obligation Risk. The pool of securities underlying collateralized bond obligations is typically separated in groupings called tranches representing different degrees of credit quality. The higher quality tranches have greater degrees of protection and pay lower interest rates. The lower tranches, with greater risk, pay higher interest rates.

Commodity Risk: The Fund’s exposure to the commodities futures markets may subject the Fund to greater volatility than investments in traditional securities. The value of commodity-linked derivative instruments, commodity-based notes may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or sectors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs, and international economic, political and regulatory developments.

Common Stock Risk. Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. Investor perceptions are based on various and unpredictable factors, including

expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction and global or regional political, economic and banking crises.

Conflict of Interest - Advisor and Sub-Advisor Risk. The Advisor, Sub-Advisor and other individuals associated with the Advisor and Sub-Advisor may have compensation and/or other arrangements that may be in conflict to the interests of the Fund.

Conflict of Interest - Portfolio Manager Risk. Actual or apparent conflicts of interest may arise when a portfolio manager has day-to-day management responsibilities with respect to more than one fund or other accounts. More specifically, portfolio managers who manage multiple funds are presented with the following potential conflicts:

- The management of multiple accounts may result in a portfolio manager devoting unequal time and attention to the management of each account. The management of multiple funds and accounts also may give rise to potential conflicts of interest if the funds and accounts have different objectives, benchmarks, time horizons, and fees as the portfolio manager must allocate his time and investment ideas across multiple funds and accounts.
- With respect to securities transactions for the Funds, the Advisor determine which broker to use to execute each order, consistent with the duty to seek best execution of the transaction. The portfolio manager may execute transactions for another fund or account that may adversely impact the value of securities held by the Fund. Securities selected for funds or accounts other than the Fund may outperform the securities selected for the Fund.
- The appearance of a conflict of interest may arise where the Advisor has an incentive, such as a performance-based management fee. The management of personal accounts may give rise to potential conflicts of interest; there is no assurance that the Fund's code of ethics will adequately address such conflicts. One of the portfolio manager's numerous responsibilities is to assist in the sale of Fund shares. Because the portfolio manager's compensation is indirectly linked to the sale of Fund shares, they may have an incentive to devote time to marketing efforts designed to increase sales of Fund shares
- The Advisor has adopted a code of ethics that, among other things, permits personal trading by employees under conditions where it has been determined that such trades would not adversely impact client accounts. Nevertheless, the management of personal accounts may give rise to potential conflicts of interest, and there is no assurance that these codes of ethics will adequately address such conflicts.

Convertible Bond Risk. Convertible bonds are hybrid securities that have characteristics of both bonds and common stocks and are subject to fixed income security risks and conversion value-related equity risk. Convertible bonds are similar to other fixed-income securities because they usually pay a fixed interest rate and are obligated to repay principal on a given date in the future. The market value of fixed-income securities tends to decline as interest rates increase. Convertible

bonds are particularly sensitive to changes in interest rates when their conversion to equity feature is small relative to the interest and principal value of the bond. Convertible issuers may not be able to make principal and interest payments on the bond as they become due. Convertible bonds may also be subject to prepayment or redemption risk. If a convertible bond is called for redemption, the Fund will be required to surrender the security for redemption, convert it into the issuing company's common stock or cash at a time that may be unfavorable to the Fund. Convertible securities have characteristics similar to common stocks especially when their conversion value is greater than the interest and principal value of the bond. The price of equity securities may rise or fall because of economic or political changes. Stock prices in general may decline over short or even extended periods of time. Market prices of equity securities in broad market segments may be adversely affected by a prominent issuer having experienced losses or by the lack of earnings or such an issuer's failure to meet the market's expectations with respect to new products or services, or even by factors wholly unrelated to the value or condition of the issuer, such as changes in interest rates. When a convertible bond's value is more closely tied to its conversion to stock feature, it is sensitive to the underlying stock's price.

Convertible Securities Risk. Convertible securities, such as convertible preferred stocks, subject the Fund to the risks associated with both fixed-income securities and equity securities. If a convertible security's investment value is greater than its conversion value, its price will likely increase when interest rates fall and decrease when interest rates rise. If the conversion value exceeds the investment value, the price of the convertible security will tend to fluctuate directly with the price of the underlying equity security.

Counterparty Risk. The Fund may engage in transactions in securities and financial instruments that involve counterparties. Counterparty risk is the risk that a counterparty (the other party to a transaction or an agreement or the party with whom the Fund executes transactions) to a transaction with the Fund may be unable or unwilling to make timely principal, interest or settlement payments, or otherwise honor its obligations.

Credit Default Swap Risk. Credit default swaps ("CDS") are typically two-party financial contracts that transfer credit exposure between the two parties. Under a typical CDS, one party (the "seller") receives pre-determined periodic payments from the other party (the "buyer"). The seller agrees to make compensating specific payments to the buyer if a negative credit event occurs, such as the bankruptcy or default by the issuer of the underlying debt instrument. The use of CDS involves investment techniques and risks different from those associated with ordinary portfolio security transactions, such as potentially heightened counterparty, concentration and exposure risks.

Credit Risk. Credit risk is the risk that an issuer of a security will fail to pay principal and interest in a timely manner, reducing the Fund's total return. The Fund may invest in high-yield, high-risk securities commonly called "junk bonds", that are not investment grade and are generally considered speculative because they present a greater risk of loss, including default, than higher quality debt securities. Credit risk may be substantial for the Fund.

Credit Risk (for Floating Rate Loans). Credit risk is the risk that the issuer of a security and other instrument will not be able to make principal and interest payments when due. The value of the Fund's shares, and the Fund's ability to pay dividends, is dependent upon the performance of

the assets in its portfolio. Prices of the Fund's investments can fall if the actual or perceived financial health of the borrowers on, or issuers of, such investments deteriorates, whether because of broad economic or issuer-specific reasons. In severe cases, the borrower or issuer could be late in paying interest or principal, or could fail to pay altogether.

In the event a borrower fails to pay scheduled interest or principal payments on an investment held by the Fund, the Fund will experience a reduction in its income and a decline in the market value of such investment. This will likely reduce the amount of dividends paid by the Fund and likely lead to a decline in the net asset value of the Fund's shares.

The Fund may invest in floating rate loans that are senior in the capital structure of the borrower or issuer, and that are secured with specific collateral. Loans that are senior and secured generally involve less risk than unsecured or subordinated debt and equity instruments of the same borrower because the payment of principal and interest on senior loans is an obligation of the borrower that, in most instances, takes precedence over the payment of dividends or the return of capital to the borrower's shareholders, and payments to bond holders; and because of the collateral supporting the repayment of the debt instrument. However, the value of the collateral may not equal the Fund's investment when the debt instrument is acquired or may decline below the principal amount of the debt instrument subsequent to the Fund's investment. Also, to the extent that collateral consists of stocks of the borrower, or its subsidiaries or affiliates, the Fund bears the risk that the stocks may decline in value, be relatively illiquid, or may lose all or substantially all of their value, causing the Fund's investment to be undercollateralized. Therefore, the liquidation of the collateral underlying a floating rate loan in which the Fund has invested, may not satisfy the borrower's obligation to the Fund in the event of non-payment of scheduled interest or principal, and the collateral may not be able to be readily liquidated.

In the event of the bankruptcy of a borrower or issuer, the Fund could experience delays and limitations on its ability to realize the benefits of the collateral securing the Fund's investment. Among the risks involved in a bankruptcy are assertions that the pledge of collateral to secure a loan constitutes a fraudulent conveyance or preferential transfer that would have the effect of nullifying or subordinating the Fund's rights to the collateral.

The floating rate debt in which the Fund invests may be generally rated lower than investment-grade credit quality, i.e., rated lower than "Baa3" by Moody's Investors Service, Inc. ("Moody's") or "BBB-" by Standard & Poor's Ratings Services ("S&P"), or have been made to borrowers who have issued debt securities that are rated lower than investment-grade in quality or, if unrated, would be rated lower than investment-grade credit quality. Investment decisions for the Fund will be based largely on the credit analysis performed by the Sub-Advisor, and not entirely on rating agency evaluation. This analysis may be difficult to perform. Information about a loan and its borrower generally is not in the public domain. Many borrowers have not issued securities to the public and are not subject to reporting requirements under federal securities laws. Generally, however, borrowers are required to provide financial information to lenders and information may be available from other loan market participants or agents that originate or administer loans.

Currency Risk: Currency trading involves significant risks, including market risk, interest rate risk, country risk, counterparty credit risk and short sale risk. Market risk results from the price movement of foreign currency values in response to shifting market supply and demand. Since

exchange rate changes can readily move in one direction, a currency position carried overnight or over a number of days may involve greater risk than one carried a few minutes or hours. Interest rate risk arises whenever a country changes its stated interest rate target associated with its currency. Country risk arises because virtually every country has interfered with international transactions in its currency. Interference has taken the form of regulation of the local exchange market, restrictions on foreign investment by residents or limits on inflows of investment funds from abroad. Restrictions on the exchange market or on international transactions are intended to affect the level or movement of the exchange rate. This risk could include the country issuing a new currency, effectively making the “old” currency worthless. The Fund may also take short positions, through derivatives, if the Advisor believes the value of a currency is likely to depreciate in value. A “short” position is, in effect, similar to a sale in which the Fund sells a currency it does not own but, has borrowed in anticipation that the market price of the currency will decline. The Fund must replace a short currency position by purchasing it at the market price at the time of replacement, which may be more or less than the price at which the Fund took a short position in the currency.

Derivatives Risk. The Fund may use derivatives to enhance returns or hedge against market declines. The Fund’s use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities including:

Leverage and Volatility Risk: Derivative contracts ordinarily have leverage inherent in their terms. The low margin deposits normally required in trading derivatives, including futures contracts, permit a high degree of leverage. In addition, it is anticipated that the Underlying Pools will be “notionally funded” - that is their nominal trading level will exceed the cash deposited in the trading accounts. Accordingly, a relatively small price movement may result in an immediate and substantial loss to the Fund. The use of leverage may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations or to meet collateral segregation requirements. The use of leveraged derivatives can magnify the Fund’s potential for gain or loss and, therefore, amplify the effects of market volatility on the Fund’s share price.

Liquidity Risk: Although it is anticipated that the derivatives traded by the Fund will be actively traded, it is possible that particular investments might be difficult to purchase or sell, possibly preventing the Fund from executing positions at an advantageous time or price, or possibly requiring them to dispose of other investments at unfavorable times or prices in order to satisfy their obligations. Most U.S. commodity futures exchanges impose daily limits regulating the maximum amount above or below the previous day’s settlement

price which a futures contract price may fluctuate during a single day. During a single trading day no trades may be executed at prices beyond the daily limit. Once the price of a particular futures contract has increased or decreased to the limit point, it may be difficult, costly or impossible to liquidate a position. It is also possible that an exchange or the Commodity Futures Trading Commission (“CFTC”), which regulates commodity futures exchanges, may suspend trading in a particular contract, order immediate settlement of a contract or order that trading to the liquidation of open positions only.

Counterparty Risk: The Fund may engage in transactions in securities and financial instruments that involve counterparties. Counterparty risk is the risk that a counterparty (the other party to a transaction or an agreement or the party with whom the Fund executes transactions) to a transaction with the Fund may be unable or unwilling to make timely principal, interest or settlement payments, or otherwise honor its obligations.

Dividend Risk. There is no guarantee that issuers of the stocks held by the Fund will declare dividends in the future or that, if declared, they will either remain at current levels or increase over time.

Dividend Yield Risk. While the Fund may hold securities of companies that have historically paid a dividend, those companies may reduce or discontinue their dividends, thus reducing the yield of the Fund. Lower priced securities in the Fund may be more susceptible to these risks. Past dividend payments are not a guarantee of future dividend payments. Also, the market return of high dividend yield securities, in certain market conditions, may be worse than the market return of other investment strategies or the overall stock market.

Duration Risk. Longer-term securities may be more sensitive to interest rate changes. Given the recent, historically low interest rates and the potential for increases in those rates, a heightened risk is posed by rising interest rates to a fund whose portfolios include longer-term fixed income securities. Effective duration estimates price changes for relatively small changes in rates. If rates rise significantly, effective duration may tend to understate the drop in a security’s price. If rates drop significantly, effective duration may tend to overstate the rise in a security’s price.

Emerging Markets Risk. Investing in emerging markets involves not only the risks described below with respect to investing in foreign securities, but also other risks, including exposure to economic structures that are generally less diverse and mature, and to political systems that can be expected to have less stability, than those of developed countries. For example, emerging markets may experience significant declines in value due to political and currency volatility. Other characteristics of emerging markets that may affect investment include certain national policies that may restrict investment by foreigners in issuers or industries deemed sensitive to relevant national interests and the absence of developed structures governing private and foreign investments and private property. The typically small size of the markets of securities of issuers located in emerging markets and the possibility of a low or nonexistent volume of trading in those securities may also result in a lack of liquidity and in price volatility of those securities.

Equity Security Risk. Common and preferred stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. Warrants and rights may expire worthless if the price of a

common stock is below the conversion price of the warrant or right. Convertible bonds may decline in value if the price of a common stock falls below the conversion price. Investor perceptions are based on various and unpredictable factors, including expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction and global or regional political, economic and banking crises.

Equity REIT Risk. Equity REITs make direct investments in real estate. Equity REITs invest primarily in real properties and may earn rental income from leasing those properties. Equity REITs may also realize gains or losses from the sale of properties. Equity REITs will be affected by conditions in the real estate rental market and by changes in the value of the properties they own. A decline in rental income may occur because of extended vacancies, limitations on rents, the failure to collect rents, increased competition from other properties or poor management. Equity REITs also can be affected by rising interest rates. Rising interest rates may cause investors to demand a high annual yield from future distributions that, in turn, could decrease the market prices for such REITs and for the properties held by such REITs. In addition, rising interest rates also increase the costs of obtaining financing for real estate projects. Because many real estate projects are dependent upon receiving financing, this could cause the value of the Equity REITs in which the Fund invests to decline.

ETFs Risk. Like an open-end investment company (mutual fund), the value of an ETF can fluctuate based on the prices of the securities owned by the ETF, and ETFs are also subject to the following additional risks: (i) the ETF's market price may be less than its net asset value; (ii) an active market for the ETF may not develop; and (iii) market trading in the ETF may be halted under certain circumstances.

Exchange Traded Notes (“ETNs”) Risk. Similar to ETFs, owning an ETN generally reflects the risks of owning the assets that comprise the underlying market benchmark or strategy that the ETN is designed to reflect. ETNs also are subject to issuer and fixed-income risk.

Extension Risk. Refers to the risk that if interest rates rise, repayments of principal on certain debt securities, including, but not limited to, floating rate loans and mortgage-related securities, may occur at a slower rate than expected and the expected maturity of those securities could lengthen as a result. Securities that are subject to extension risk generally have a greater potential for loss when prevailing interest rates rise, which could cause their values to fall sharply.

Fixed Income Risk. When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities.

The Fund may have exposure to LIBOR-linked investments and anticipates that LIBOR will be phased out by the end of 2021. While some instruments may contemplate a scenario where LIBOR is no longer available by providing for an alternative rate setting methodology, not all instruments may have such provisions and there is significant uncertainty regarding the effectiveness of any such alternative methodologies and potential for short-term and long-term market instability.

Because of the uncertainty regarding the nature of any replacement rate, the Fund cannot reasonably estimate the impact of the anticipated transition away from LIBOR at this time. If the LIBOR replacement rate is lower than market expectations, there could be an adverse impact on the value of preferred and debt securities with floating or fixed-to-floating rate coupons.

Other risk factors include credit risk (the debtor may default) and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.

Foreign Currency Risk: Currency trading involves significant risks, including market risk, interest rate risk, country risk, counterparty credit risk and short sale risk. Market risk results from the price movement of foreign currency values in response to shifting market supply and demand. Since exchange rate changes can readily move in one direction, a currency position carried overnight or over a number of days may involve greater risk than one carried a few minutes or hours. Interest rate risk arises whenever a country changes its stated interest rate target associated with its currency. Country risk arises because virtually every country has interfered with international transactions in its currency. Interference has taken the form of regulation of the local exchange market, restrictions on foreign investment by residents or limits on inflows of investment funds from abroad. Restrictions on the exchange market or on international transactions are intended to affect the level or movement of the exchange rate. This risk could include the country issuing a new currency, effectively making the "old" currency worthless.

Foreign Exchanges Risk: A portion of the derivatives trades made by the Fund may be take place on foreign markets. Neither existing CFTC regulations nor regulations of any other U.S. governmental agency apply to transactions on foreign markets. Some of these foreign markets, in contrast to U.S. exchanges, are so-called principals' markets in which performance is the responsibility only of the individual counterparty with whom the trader has entered into a commodity interest transaction and not of the exchange or clearing corporation. In these kinds of markets, there is risk of bankruptcy or other failure or refusal to perform by the counterparty.

Foreign Investment Risk: Foreign investing involves risks not typically associated with U.S. investments, including adverse fluctuations in foreign currency values, adverse political, social and economic developments, less liquidity, greater volatility, less developed or less efficient trading markets, political instability and differing auditing and legal standards. Investing in emerging markets imposes risks different from, or greater than, risks of investing in foreign developed countries.

Foreign Securities Risk. Since the Fund's investments may include ADRs and foreign securities, the Fund is subject to risks beyond those associated with investing in domestic securities. The value of foreign securities is subject to currency fluctuations. Foreign companies are generally not subject to the same regulatory requirements of U.S. companies thereby resulting in less publicly available information about these companies. In addition, foreign accounting, auditing and financial reporting standards generally differ from those applicable to U.S. companies. Depository receipts maintain substantially the same risks as those associated with investments in foreign securities and may be under no obligation to distribute shareholder communications or pass through any voting rights with respect to the deposited securities.

Forwards Risk. Foreign currency forward contracts are a type of derivative contract whereby the Fund may agree to buy or sell a country's or region's currency at a specific price on a specific date, usually 30, 60, or 90 days in the future. These contracts are subject to the risk of political and economic factors applicable to the countries issuing the underlying currencies and may fall in value due to foreign market downswings or foreign currency value fluctuations. Foreign currency forward contracts are individually negotiated and privately traded so they are dependent upon the creditworthiness of the counterparty and subject to counterparty risk. The Fund's investment or hedging strategies may not achieve their objective. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Derivative contracts ordinarily have leverage inherent in their terms and low margin deposits normally required in trading derivatives permit a high degree of leverage. Accordingly, a relatively small price movement may result in an immediate and substantial loss to the Fund. The use of leverage may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations or to meet collateral segregation requirements. The use of leveraged derivatives can magnify the Fund's potential for gain or loss and, therefore, amplify the effects of market volatility on the Fund's share price.

Futures Contract Risk. The successful use of futures contracts draws upon the Advisor's or Sub-Advisor's skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Advisor's or Sub-Advisor's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

The Fund's use of stock index futures as a substitute for stocks or to enhance returns involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) leverage risk (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the futures contract may not correlate perfectly with the underlying index. Investments in futures involve leverage, which means a small percentage of assets invested in futures can have a disproportionately large impact on the Fund. This risk could cause the Fund to lose more than the principal amount invested. Futures contracts may become mispriced or improperly valued when compared to the Advisor's or Sub-Advisor's expectation and may not produce the desired investment results. Additionally, changes in the value of futures contracts may not track or correlate perfectly with the underlying index because of temporary, or even long-term, supply and demand imbalances and because futures do not pay dividends unlike the stocks upon which they are based.

Geographic Concentration Risk. The Fund may be particularly susceptible to economic, political, regulatory or other events or conditions affecting countries within the specific geographic regions in which the Fund invests. Currency devaluations could occur in countries that have not yet experienced currency devaluation to date, or could continue to occur in countries that have already experienced such devaluations. As a result, the Fund's net asset value may be more volatile than a more geographically diversified fund.

Growth Stock Risk. "Growth" stocks can react differently to issuer, political, market, and economic developments than the market as a whole and other types of stocks. "Growth" stocks also tend to be more expensive relative to their earnings or assets compared to other types of stocks. As a result, "growth" stocks tend to be sensitive to changes in their earnings and more volatile in price than the stock market as a whole. In addition, companies that the Advisor or Sub-Advisor believes have significant growth potential are often companies with new, limited or cyclical product lines, markets or financial resources and the management of such companies may be dependent upon one or a few key people. The stocks of such companies can therefore be subject to more abrupt or erratic market movements than stocks of larger, more established companies or the stock market in general.

Hedging Risk. Hedging is a strategy in which the Fund uses a derivative to offset the risks associated with other Fund holdings. There can be no assurance that the Fund's hedging strategy will reduce risk or that hedging transactions will be either available or cost effective. The Fund is not required to use hedging and may choose not to do so.

Index Risk. If the derivative is linked to the performance of an index, it will be subject to the risks associated with changes in that index.

Inflation-Indexed Bond Risk. Inflation-indexed bonds are fixed income securities whose principal values are periodically adjusted according to a measure of inflation. If the index measuring inflation falls, the principal value of inflation-indexed bonds will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of U.S. Treasury inflation indexed bonds. For bonds that do not provide a similar guarantee, the adjusted principal value of the bond repaid at maturity may be less than the original principal. With regard to municipal inflation-indexed bonds and certain corporate inflation-indexed bonds, the inflation adjustment is reflected in the semi-annual coupon payment. As a result, the principal value of municipal inflation-indexed bonds and such corporate inflation indexed bonds does not adjust according to the rate of inflation. The value of inflation-indexed bonds is expected to change in response to changes in real interest rates. Real interest rates are tied to the relationship between nominal interest rates and the rate of inflation. If nominal interest rates increase at a faster rate than inflation, real interest rates may rise, leading to a decrease in value of inflation-indexed bonds. Inflation-indexed bonds may cause a potential cash flow mismatch to investors, because an increase in the principal amount of an inflation-indexed bond will be treated as interest income currently subject to tax at ordinary income rates even though investors will not receive repayment of principal until maturity. If the Fund invests in such bonds, it will be required to distribute such interest income in order to qualify for treatment as a regulated investment company and eliminate the Fund-level tax, without a corresponding receipt of cash,

and therefore may be required to dispose of portfolio securities at a time when it may not be desirable.

Inflation Protected Securities Risk. Inflation-protected debt securities tend to react to changes in real interest rates. Real interest rates represent nominal (stated) interest rates reduced by the expected impact of inflation. In general, the price of an inflation-protected debt security can fall when real interest rates rise, and can rise when real interest rates fall. Interest payments on inflation-protected debt securities can be unpredictable and will vary as the principal and/or interest is adjusted for inflation.

Interest Rate Risk. Interest rate risk is the risk that bond prices overall, including the prices of securities held by the Fund, will decline over short or even long periods of time due to rising interest rates. Bonds with longer maturities tend to be more sensitive to interest rates than bonds with shorter maturities. For example, if interest rates go up by 1.0%, the price of a 4% coupon bond will decrease by approximately 1.0% for a bond with 1 year to maturity and approximately 4.4% for a bond with 5 years to maturity.

Interest Rate Risk (for Floating Rate Loans). Changes in short-term market interest rates will directly affect the yield on the shares of the Fund whose investments are normally invested in floating rate debt. If short-term market interest rates fall, the yield on the Fund's shares will also fall. Conversely, when short-term market interest rates rise, because of the lag between changes in such short-term rates and the resetting of the floating rates on the floating rate debt in the Fund's portfolio, the impact of rising rates will be delayed to the extent of such lag. The impact of market interest rate changes on the Fund's yield will also be affected by whether, and the extent to which, the floating rate debt in the Fund's portfolio is subject to floors on the LIBOR base rate on which interest is calculated for such loans (a "LIBOR floor"). So long as the base rate for a loan remains under the LIBOR floor, changes in short-term interest rates will not affect the yield on such loans. In addition, to the extent that the interest rate spreads on floating rate debt in the Fund's portfolio experience a general decline, the yield on the Fund's shares will fall and the value of the Fund's assets may decrease, which will cause the Fund's net asset value to decrease. With respect to the Fund's investments in fixed rate instruments, a rise in interest rates generally causes values to fall. The values of fixed rate securities with longer maturities or duration are more sensitive to changes in interest rates.

Inverse ETF Risk: Investing in inverse ETFs may result in increased volatility due to the Fund's possible use of short sales of securities and derivatives such as options and futures. The use of leverage by an ETF increases risk to the Fund. The more the Fund invests in leveraged instruments, the more the leverage will magnify any gains or losses on those investments. During periods of increased volatility, inverse ETFs may not perform in the manner they are designed.

Investment Model Risk. Like all quantitative analysis, the Advisor's or Sub-Advisor's investment model carries a risk that the mathematical model used might be based on one or more incorrect assumptions. Rapidly changing and unforeseen market dynamics could also lead to a decrease in short term effectiveness of the mathematical model. No assurance can be given that the fund will be successful under all or any market conditions.

Issuer Specific Risk. The value of a specific security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than those of larger issuers. The value of certain types of securities can be more volatile due to increased sensitivity to adverse issuer, political, regulatory, market, or economic developments. The value of each underlying pool will be dependent on the success of the strategies used by its manager or managers. Certain managers may be dependent upon a single individual or small group of individuals, the loss of which could adversely affect their success.

IPO Risk. The Fund may invest in IPOs at the time of the offering and in post-IPO trading. The stocks of such companies are unseasoned equities lacking a trading history, a track record of reporting to investors and widely available research coverage. IPOs are thus often subject to extreme price volatility and speculative trading. Due to limited shares available on the IPO, the Fund purchases most of its holdings in post-IPO trading. These stocks may have above-average price appreciation in connection with the initial public offering prior to inclusion in the Fund. The price of stocks included in the Fund may not continue to appreciate and the performance of these stocks may not replicate the performance exhibited in the past. In addition, IPOs share similar liquidity risks as private equity and venture capital. Such liquidity risks exist when particular investments of the Fund would be difficult to purchase or sell, possibly preventing the Fund from selling such illiquid securities at an advantageous time or price, or possibly requiring the Fund to dispose of other investments at unfavorable times or prices in order to satisfy its obligations. The free float shares held by the public in an IPO are typically a small percentage of the market capitalization. The ownership of many IPOs often include large holdings by venture capital and private equity investors who seek to sell their shares in the public market in the months following an IPO when shares restricted by lock-up are released, causing greater volatility and possible downward pressure during the time that lock-up shares are released.

Junk Bond Risk. Lower-quality bonds, known as “high yield” or “junk” bonds, present a significant risk for loss of principal and interest. These bonds offer the potential for higher return, but also involve greater risk than bonds of higher quality, including an increased possibility that the bond’s issuer, obligor or guarantor may not be able to make its payments of interest and principal (credit quality risk). If that happens, the value of the bond may decrease, and the Fund’s share price may decrease and its income distribution may be reduced. An economic downturn or period of rising interest rates (interest rate risk) could adversely affect the market for these bonds and reduce the Fund’s ability to sell its bonds (liquidity risk). Such securities may also include “Rule 144A” securities, which are subject to resale restrictions. The lack of a liquid market for these bonds could decrease the Fund’s share price.

Large Capitalization Stock Risk. Large-capitalization companies may be less able than smaller capitalization companies to adapt to changing market conditions. Large-capitalization companies may be more mature and subject to more limited growth potential compared with smaller capitalization companies. During different market cycles, the performance of large capitalization companies has trailed the overall performance of the broader securities markets.

Leverage Risk. Using derivatives can create leverage, which can amplify the effects of market volatility on the Fund’s share price and make the Fund’s returns more volatile. The use of leverage may cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in

order to satisfy its obligations. The use of leverage may also cause the Fund to have higher expenses than those of mutual funds that do not use such techniques.

Leveraged ETF Risk. Leveraged ETFs will amplify losses because they are designed to produce returns that are a multiple of the index to which they are linked. Most leveraged ETFs “reset” daily. Due to the effect of compounding, their performance over longer periods of time can differ significantly from the performance of their underlying index or benchmark during the same period of time.

Limited History of Operations Risk. The Fund is a new fund and has a limited history of operations for investors to evaluate. Investors in the Fund bear the risk that the Fund may not be successful in implementing its investment strategies, may be unable to implement certain of its investment strategies or may fail to attract sufficient assets, any of which could result in the Fund being liquidated and terminated at any time without shareholder approval and at a time that may not be favorable for all shareholders. Such a liquidation could have negative tax consequences for shareholders and will cause shareholders to incur expenses of liquidation. Mutual funds and their advisers are subject to restrictions and limitations imposed by the Investment Company Act of 1940, as amended, and the Internal Revenue Code that do not apply to the Advisor's and Sub-Advisor's management of individual and institutional accounts. As a result, the Advisor and Sub-Advisor may not achieve the intended result in managing the Fund.

Liquidity Risk. Liquidity risk exists when particular investments of the Fund would be difficult to purchase or sell, possibly preventing the Fund from selling such illiquid securities at an advantageous time or price, or possibly requiring the Fund to dispose of other investments at unfavorable times or prices in order to satisfy its obligations.

Litigation Risk. The Fund may be named in a lawsuit despite no wrongdoing by the Fund, its Advisor or Sub-Advisor or any other service provider to the Fund. The defense of a lawsuit may detrimentally impact the Fund and its shareholders, including incurring legal defense cost, regulatory costs and increased insurance premiums.

Loan Risk. Investments in bank loans may subject the Fund to heightened credit risks because such loans tend to be highly leveraged and potentially more susceptible to the risks of interest deferral, default and/or bankruptcy. Senior floating rate loans are often rated below investment grade, but may also be unrated. The risks associated with these loans can be similar to the risks of below investment grade fixed income instruments. An economic downturn would generally lead to a higher non-payment rate, and a senior floating rate loan may lose significant market value before a default occurs. Moreover, any specific collateral used to secure a senior floating rate loan may decline in value or become illiquid, which would adversely affect the loan's value. Unlike the securities markets, there is no central clearinghouse for loan trades, and the loan market has not established enforceable settlement standards or remedies for failure to settle. Therefore, portfolio transactions in loans may have uncertain settlement time periods. Senior floating rate loans are subject to a number of risks described elsewhere in this Prospectus, including liquidity risk and the risk of investing in below-investment grade fixed income instruments.

Managed Volatility Risk. Techniques used by the adviser to manage the volatility of the Fund's investments carry the risks that such techniques may not protect against market declines. The

techniques may also limit the Fund's participation in market gains, particularly during periods where market values are increasing but market volatility is high. Further, such techniques may increase portfolio transaction costs, which could result in losses or reduced gains. They also may not be successful as the techniques are subject to the Advisor's and Sub-Advisor's ability to correctly analyze and implement, in a timely manner, the volatility management techniques.

Management Risk. The portfolio managers' judgments about the attractiveness, value and potential appreciation of particular stocks or other securities in which the Fund invests may prove to be incorrect and there is no guarantee that the portfolio managers' judgment will produce the desired results.

Market Risk. Overall stock and bond market risks may also affect the value of the Fund. Factors such as domestic economic growth and market conditions, interest rate levels and political events affect the securities markets. Stocks and bonds involve the risk that they may never reach what the manager believes is their full market value, either because the market fails to recognize the security's intrinsic worth or the manager misgauged that worth. They also may decline in price, even though, in theory, they are already undervalued.

Market Volatility-Linked ETFs Risk. ETFs that are linked to market volatility have the risks associated with investing in futures. An ETF's use of futures involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) leverage risk (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the futures contract may not correlate perfectly with the underlying index. Investments in futures involve leverage, which means a small percentage of assets invested in futures can have a disproportionately large impact on the Fund. This risk could cause the ETF to lose more than the principal amount invested. Futures contracts may become mispriced or improperly valued when compared to the Advisor's or Sub-Advisor's expectation and may not produce the desired investment results. Additionally, changes in the value of futures contracts may not track or correlate perfectly with the underlying index because of temporary, or even long-term, supply and demand imbalances and because futures do not pay dividends unlike the stocks upon which they are based.

MBS and CMO Risk. MBS and CMOs are subject to credit risk because underlying loan borrowers may default. MBS and CMO default rates tend to be sensitive to overall economic conditions and to localized property vacancy rates and prices. Borrower default rates may be significantly higher than estimated. Certain individual securities may be more sensitive to default rates because payments may be subordinated to other securities of the same issuer. The Advisor's or Sub-Advisor's assessment, or a rating agency's assessment, of borrower credit quality, default rates and loss rates may prove to be overly optimistic. Additionally, MBS and CMOs are subject to prepayment risk because the underlying loans held by the issuers may be paid off prior to maturity at faster or lower rates than expected. The value of these securities may go down as a result of changes in prepayment rates on the underlying mortgages or loans. During periods of declining interest rates, prepayment rates usually increases and the Fund may have to reinvest prepayment proceeds at a lower interest rate. CMOs may be less susceptible to this risk because payment priorities within the CMO may have the effect of a prepayment lock out period.

Medium (Mid) Capitalization Stock Risk. To the extent the Fund invests in the stocks of mid-sized companies, the Fund may be subject to additional risks. The earnings and prospects of these companies are more volatile than larger companies. These companies may experience higher failure rates than larger companies. Mid-sized companies normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures. Mid-sized companies may also have limited markets, product lines or financial resources and may lack management experience.

Micro Capitalization Risk. Micro capitalization companies may be newly formed or have limited product lines, distribution channels and financial and managerial resources. The risks associated with those investments are generally greater than those associated with investments in the securities of larger, more established companies. This may cause the Fund's net asset value to be more volatile when compared to investment companies that focus only on large capitalization companies.

Generally, securities of micro capitalization companies are more likely to experience sharper swings in market value, less liquid markets in which it may be more difficult for the Advisor and/or Sub-Advisor to sell at times and at prices that the Advisor and/or Sub-Advisor believes appropriate and generally are more volatile than those of larger companies. Compared to large companies, micro capitalization companies are more likely to have (i) less information publicly available, (ii) more limited product lines or markets and less mature businesses, (iii) fewer capital resources, (iv) more limited management depth and (v) shorter operating histories. Further, the equity securities of micro capitalization companies are often traded over the counter and generally experience a lower trading volume than is typical for securities that are traded on a national securities exchange. Consequently, the Fund may be required to dispose of these securities over a larger period of time (and potentially at less favorable prices) than would be the case for securities of larger companies, offering greater potential for gains and losses and associated tax consequences.

MLP and MLP-Related Securities. Investments in MLPs and MLP-related securities involve risks different from those of investing in common stock including risks related to limited control and limited rights to vote on matters affecting the MLP or MLP-related security, risks related to potential conflicts of interest between an MLP and the MLP's general partner, cash flow risks, dilution risks (which could occur if the MLP raises capital and then invests it in projects whose return fails to exceed the cost of capital raised) and risks related to the general partner's limited call right. MLPs and MLP-related securities are generally considered interest-rate sensitive investments. During periods of interest rate volatility, these investments may not provide attractive returns. Depending on the state of interest rates in general, the use of MLPs or MLP-related securities could enhance or harm the overall performance of the Fund.

MLP Tax Risk. MLPs, typically, do not pay U.S. federal income tax at the partnership level. Instead, each partner is allocated a share of the partnership's income, gains, losses, deductions and expenses. A change in current tax law or in the underlying business mix of a given MLP could result in an MLP being treated as a corporation for U.S. federal income tax purposes, which would result in such MLP being required to pay U.S. federal income tax on its taxable income. The classification of an MLP as a corporation for U.S. federal income tax purposes would have the effect of reducing the amount of cash available for distribution by the MLP. Thus, if any of the MLPs owned by the Fund were treated as

corporations for U.S. federal income tax purposes, it could result in a reduction of the value of your investment in the Fund and lower income, as compared to an MLP that is not taxed as a corporation

Model and Data Risk. The Fund's strategy may rely heavily on quantitative models (both proprietary models and those supplied by third parties) and information and data supplied by third parties (collectively, "Models and Data"). Models and Data are used to construct sets of transactions and investments to be included in a portfolio, as well as to provide risk management insights.

When Models and Data prove to be incorrect or incomplete, any decisions made in reliance thereon expose the Fund to potential risks. Some of the models used by the Advisor are predictive in nature. The use of predictive models has inherent risks. Because predictive models are usually constructed based on historical data supplied by third parties, the success of relying on such models may depend heavily on the accuracy and reliability of the supplied historical data. All models rely on correct market data inputs. If incorrect market data is entered into even a well-founded model, the resulting information will be incorrect.

Mortgage-Backed Securities Risk. Mortgage-backed securities may represent interests in pools of agency and non-agency residential and commercial mortgage loans, some of which are guaranteed by the U.S. Government, its agencies or instrumentalities. However, the guarantee of these types of securities relates to the principal and interest payments and not the market value of such securities. In addition, the guarantee only relates to the mortgage-backed securities held by the Fund and not the purchase of shares of the Fund.

Mortgage-backed securities do not have a fixed maturity and their expected maturities may vary when interest rates rise or fall. An increased rate of prepayments on the Fund's mortgage-backed securities will result in an unforeseen loss of interest income to the Fund as the Fund may be required to reinvest assets at a lower interest rate. A decreased rate of prepayments lengthens the expected maturity of a mortgage-backed security. The prices of mortgage-backed securities may decrease more than prices of other fixed-income securities when interest rates rise.

The liquidity of mortgage-backed securities may change dramatically over time.

Mortgage REITs Risk. Mortgage REITs lend money to developers and owners of properties and invest primarily in mortgages and similar real estate interests. Mortgage REITs receive interest payments from the owners of the mortgaged properties. Accordingly, mortgage REITs are subject to the credit risk of the borrowers to whom they extend funds, which is the risk that the borrower will not be able to make timely interest and principal payments on the loan to the mortgage REIT. Mortgage REITs also are subject to the risk that the value of mortgaged properties may be less than the amounts owed on the properties. If a mortgage REIT is required to foreclose on a borrower, the amount recovered in connection with the foreclosure may be less than the amount owed to the mortgage REIT. Mortgage REITs are subject to significant interest rate risk. During periods when interest rates are declining, mortgages are often refinanced or prepaid. Refinancing or prepayment of mortgages may reduce the yield of mortgage REITs. When interest rates decline, the value of a mortgage REIT's investment in fixed rate obligations can be expected to rise. Conversely, when interest rates rise, the value of a mortgage REIT's investment in fixed rate

obligations can be expected to decline. In addition, rising interest rates generally increase the costs of obtaining financing, which could cause the value of a mortgage REIT's investments to decline. A mortgage REIT's investment in adjustable rate obligations may react differently to interest rate changes than an investment in fixed rate obligations. As interest rates on adjustable rate mortgage loans are reset periodically, yields on a mortgage REIT's investment in such loans will gradually align themselves to reflect changes in market interest rates, causing the value of such investments to fluctuate less dramatically in response to interest rate fluctuations than would investments in fixed rate obligations. Mortgage REITs typically use leverage (and in many cases, may be highly leveraged), which increases investment risk and could adversely affect a mortgage REIT's operations and market value in periods of rising interest rates, increased interest rate volatility, downturns in the economy, reductions in the availability of financing or deterioration in the conditions of the mortgage REIT's mortgage-related assets.

Municipal Bond Risk. The value of municipal bonds that depend on a specific revenue source or general revenue source to fund their payment obligations may fluctuate as a result of changes in the cash flows generated by the revenue source(s) or changes in the priority of the municipal obligation to receive the cash flows generated by the revenue source(s). In addition, changes in federal tax laws or the activity of an issuer may adversely affect the tax-exempt status of municipal bonds. There is no guarantee that a municipality will to pay interest or repay principal. In addition, the ability of an issuer to make payments or repay interest may be affected by litigation or bankruptcy. In the event of such an issuer's bankruptcy, the Fund could experience delays in collecting principal and interest, and may not, in all circumstances, be able to collect all principal and interest to which it is entitled. To enforce its rights in the event of a default in the payment of interest or repayment of principal, or both, a debt holder may, in some instances, take possession of, and manage, the assets securing the issuer's obligations on such securities, which may increase the Fund's operating expenses. Any income derived from the Fund's ownership or operation of such assets may not be tax-exempt. Municipal bonds are generally subject to interest rate, credit and market risk.

Because many municipal bonds are issued to finance similar projects (such as those relating to education, health care, housing, transportation, and utilities), conditions in those sectors may affect the overall municipal securities market. In addition, changes in the financial condition of an individual municipal issuer can affect the overall municipal market. Municipal bonds backed by current or anticipated revenues from a specific project or specific assets can be negatively affected by the discontinuance of the supporting taxation or the inability to collect revenues for the specific project or specific assets. Municipal bonds are subject to the risk that the Internal Revenue Service (the "IRS") may determine that an issuer has not complied with applicable tax requirements and that interest from the municipal bond is taxable, which may result in a significant decline in the value of the security. Municipal bonds may be less liquid than taxable bonds and there may be less publicly available information on the financial condition of municipal bond issuers than for issuers of other securities, and the investment performance of the Fund may therefore, be more dependent on the analytical abilities of the Advisor or Sub-Advisor than if the Fund held other types of investments. The secondary market for municipal bonds also tends to be less well-developed or liquid than many other securities markets, a by-product of lower capital commitments to the asset class by the dealer community, which may adversely affect the Fund's ability to sell municipal bonds at attractive prices or value municipal bonds.

Non-diversification Risk. The Fund is non-diversified. This means that it may invest a larger portion of its assets in a limited number of companies than a diversified fund. Because a relatively high percentage of the Fund's assets may be invested in the securities of a limited number of companies that could be in the same or related economic sectors, the Fund's portfolio may be more susceptible to any single economic, technological or regulatory occurrence than the portfolio of a diversified fund.

Options Market Risk. Markets for options and options on futures may not always operate on a fair and orderly basis. At times, prices for options and options on futures may not represent fair market value and prices may be subject to manipulation, which may be extreme under some circumstances. The dysfunction and manipulation of volatility and options markets may make it difficult for the fund to effectively implement its investment strategy and achieve its objectives and could potentially lead to significant losses.

Options Risk. There are risks associated with the sale and purchase of call and put options. As the seller (writer) of a call option, the Fund assumes the risk of a decline in the market price of the underlying security below the purchase price of the underlying security less the premium received, and gives up the opportunity for gain on the underlying security above the exercise option price. As the buyer of a put or call option, the Fund risks losing the entire premium invested in the option if the Fund does not exercise the option. As a seller (writer) of a put option, the Fund will lose money if the value of the security falls below the strike price. If unhedged, the Fund's written calls expose the Fund to potentially unlimited losses.

Over-the-Counter ("OTC") Trading Risk. Certain of the derivatives in which the Fund may invest may be traded (and privately negotiated) in the OTC market. While the OTC derivatives market is the primary trading venue for many derivatives, it is largely unregulated. As a result and similar to other privately negotiated contracts, the Fund is subject to counterparty credit risk with respect to such derivative contracts.

Preferred Stock Risk. The value of preferred stocks will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of preferred stock. Preferred stocks are also subject to credit risk, which is the possibility that an issuer of preferred stock will fail to make its dividend payments. Preferred stock prices tend to move more slowly upwards than common stock prices. In an issuer bankruptcy, preferred stock holders are subordinate to the claims of debtholders and may receive little or no recovery.

Prepayment Risk. During periods of declining interest rates, prepayment of loans underlying mortgage-backed and asset-backed securities usually accelerates. Prepayment may shorten the effective maturities of these securities, reducing their yield and market value, and the Fund may have to reinvest at a lower interest rate.

REIT and Real Estate Investment Risk. The Fund invests in REITs which expose investors to the risks of owning real estate directly, as well as to risks that relate specifically to the way in which REITs are organized and operated. Many REITs utilize leverage (and some may be highly leveraged), which increases investment risk and the risk normally associated with debt financing, and could potentially increase the Fund's losses. Rising interest rates could result in higher costs of capital for REITs, which could negatively affect a REIT's ability to meet its payment obligations

or its financing activity, and could decrease the market prices for REITs and for properties held by such REITs. Real estate is highly sensitive to general and local economic conditions and developments and is characterized by intense competition and periodic overbuilding. The U.S. residential and commercial real estate markets may, in the future, experience and have, in the past, experienced a decline in value, with certain regions experiencing significant losses in property values. Exposure to such real estate may adversely affect Fund performance. In addition, to the extent a REIT has its own expenses, the Fund will bear its proportionate share of such expenses.

REITs may own a limited number of properties and concentrate their investments in a particular geographic region, industry or property type. Economic downturns affecting a particular region, industry or property type may lead to a high volume of defaults within a short period.

Equity REITs make direct investments in real estate. Equity REITs invest primarily in real properties and may earn rental income from leasing those properties. Equity REITs may also realize gains or losses from the sale of properties. Equity REITs will be affected by conditions in the real estate rental market and by changes in the value of the properties they own. A decline in rental income may occur because of extended vacancies, limitations on rents, the failure to collect rents, increased competition from other properties or poor management. Equity REITs also can be affected by rising interest rates. Rising interest rates may cause investors to demand a high annual yield from future distributions that, in turn, could decrease the market prices for such REITs and for the properties held by such REITs. In addition, rising interest rates also increase the costs of obtaining financing for real estate projects. Because many real estate projects are dependent upon receiving financing, this could cause the value of the Equity REITs in which the Fund invests to decline.

Rising interest rates could result in higher costs of capital for REITs, which could negatively affect a REIT's ability to meet its payment obligations. Declining interest rates could result in increased prepayment on loans and require redeployment of capital in less desirable investments.

REITs may use leverage (and some may be highly leveraged), which increases investment risk and the risks normally associated with debt financing and could adversely affect a REIT's operations and market value in periods of rising interest rates. Financial covenants related to a REIT's leveraging may affect the ability of the REIT to operate effectively. In addition, investments may be subject to defaults by borrowers and tenants. Leveraging may also increase repayment risk.

Investing in REITs may involve risks similar to those associated with investing in small-capitalization companies. REIT securities may be volatile. There may be less trading in REIT shares, which means that purchase and sale transactions in those shares could have a magnified impact on share price, resulting in abrupt or erratic price fluctuations. In addition, real estate is relatively illiquid and, therefore, a REIT may have a limited ability to vary or liquidate its investments in properties in response to changes in economic or other conditions.

A REIT may foreclose on loans that the REIT originated and/or acquired. Foreclosure may generate negative publicity for the underlying property that affects its market value. In addition to length and expense, the validity of the terms of the applicable loan may not be enforced in foreclosure proceedings.

REITs are dependent upon management skills and may have limited financial resources. REITs are generally not diversified and may be subject to heavy cash flow dependency, default by borrowers and self-liquidation. In addition, transactions between real estate companies and their affiliates may be subject to conflicts of interest, which may adversely affect a REIT's shareholders. A REIT may also have joint ventures in certain of its properties and, consequently, its ability to control decisions relating to such properties may be limited.

REITs may be subject to risks relating to functional obsolescence or reduced desirability of properties; extended vacancies due to economic conditions and tenant bankruptcies; property damage due to events such as earthquakes, hurricanes, tornadoes, rodent, insect or disease infestations and terrorist acts; eminent domain seizures; and casualty or condemnation losses. Real estate income and values also may be greatly affected by demographic trends, such as population shifts, changing tastes and values, increasing vacancies or declining rents resulting from legal, cultural, technological, global or local economic developments and changes in tax law.

Real estate income and values may be adversely affected by applicable domestic and foreign laws (including tax laws). Government actions, such as tax increases, zoning law changes, reduced funding for schools, parks, garbage collection and other public services or environmental regulations also may have a major impact on real estate income and values.

The prices of REIT securities may drop because of the failure of borrowers to repay their loans, poor management, or the inability to obtain financing either on favorable terms or at all. If the properties in which a REIT invest do not generate sufficient income to meet operating expenses, including, where applicable, debt service, ground lease payments, tenant improvements, third-party leasing commissions and other capital expenditures, the income and ability of the REITs to make payments of interest and principal on their loans will be adversely affected.

Certain U.S. REITs are subject to special U.S. federal tax requirements. A REIT that fails to comply with such tax requirements may be subject to U.S. federal income taxation, which may affect the value of the REIT and the characterization of the REIT's distributions. The U.S. federal tax requirement that a REIT distributes substantially all of its net income to its shareholders may result in the REIT having insufficient capital for future expenditures. A REIT that successfully maintains its qualification may still become subject to U.S. federal, state and local taxes, including excise, penalty, franchise, payroll, mortgage recording, and transfer taxes, both directly and indirectly through its subsidiaries.

Regulatory Risk. Changes in the laws or regulations of the United States or other countries, including any changes to applicable tax laws and regulations, could impair the ability of the Fund to achieve its investment objective and could increase the operating expenses of the Fund.

Repurchase and Reverse Repurchase Agreements Risk. The Fund may enter into repurchase agreements in which it purchases a security (known as the "underlying security") from a securities dealer or bank. In the event of a bankruptcy or other default by the seller of a purchase agreement, the Fund could experience delays in liquidating the underlying security and losses in the event of a decline in the value of the underlying security while the Fund is seeking to enforce its rights under the repurchase agreement. Reverse repurchase agreements involve the sale of securities held

by the Fund with an agreement to repurchase the securities at an agreed-upon price, date and interest payment, and involve the risk that (i) the other party may fail to return the securities in a timely manner, or at all, and (ii) the market value of assets that are required to be repurchased decline below the purchase price of the asset that has to be sold, resulting in losses to the Fund.

Restricted Securities Risk. The Fund may hold securities that are restricted as to resale under the U.S. federal securities laws. There can be no assurance that a trading market will exist at any time for any particular restricted security. Limitations on the resale of these securities may prevent the Fund from disposing of them promptly at reasonable prices or at all. The Fund may have to bear the expense of registering the securities for resale and the risk of substantial delays in effecting the registration. Also, restricted securities may be difficult to value because market quotations may not be readily available, and the values of restricted securities may have significant volatility.

Risk Management Risk. The measures that the Advisor, Sub-Advisor or portfolio manager use to monitor and manage the risks of the Fund may not accomplish the intended results and the Fund may experience losses significantly greater than expected.

Security Risk. The value of the Fund may decrease in response to the activities and financial prospects of an individual security in the Fund's portfolio. The net asset value of the Fund will fluctuate based on changes in the value of the securities in which the Fund invests. The Fund may invest in securities that may be more volatile and carry more risk than some other forms of investment. The price of securities may rise or fall because of economic or political changes. Security prices in general may decline over short or even extended periods of time. Market prices of securities in broad market segments may be adversely affected by a prominent issuer having experienced losses, lack of earnings, failure to meet the market's expectations with respect to new products or services, or even by factors wholly unrelated to the value or condition of the issuer, such as changes in interest rates.

Segregation Risk. In order to secure its obligations to cover its short positions on options, the Fund will either own the underlying assets, enter into offsetting transactions or set aside cash or readily marketable securities. This requirement may cause the Fund to miss favorable trading opportunities, due to a lack of sufficient cash or readily marketable securities. This requirement may also cause the Fund to realize losses on offsetting or terminated derivative contracts or special transactions.

Short Position Risk: The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss. The Fund's short positions may result in a loss if the price of the short position instruments rise and it costs more to replace the short positions. In contrast to the Fund's long positions, for which the risk of loss is typically limited to the amount invested, the potential loss on the Fund's short positions is potentially large. Market factors may prevent the Fund from closing out a short position at the most desirable time or at a favorable price.

Short Selling Risk. If a security sold short increases in price, the Fund may have to cover its short position at a higher price than the short sale price, resulting in a loss. The Fund may have substantial short positions and must borrow those securities to make delivery to the buyer. The Fund may not be able to borrow a security that it needs to deliver or it may not be able to close out

a short position at an acceptable price and may have to sell related long positions before it had intended to do so. Thus, the Fund may not be able to successfully implement its short sale strategy due to limited availability of desired securities or for other reasons.

Small Capitalization Stock Risk. To the extent the Fund invests in the stocks of smaller-sized companies, the Fund may be subject to additional risks. The earnings and prospects of these companies are more volatile than larger companies. Smaller-sized companies may experience higher failure rates than do larger companies. The trading volume of securities of smaller-sized companies is normally less than that of larger companies and, therefore, may disproportionately affect their market price, tending to make them fall more in response to selling pressure than is the case with larger companies. Smaller-sized companies may have limited markets, product lines or financial resources and may lack management experience.

Sovereign Debt Risk. The issuer of the foreign debt or the governmental authorities that control the repayment of the debt may be unable or unwilling to repay principal or interest when due, and the Fund may have limited recourse in the event of a default. The market prices of sovereign debt, and the Fund's net asset value, may be more volatile than prices of U.S. debt obligations and certain emerging markets may encounter difficulties in servicing their debt obligations.

Structured Note Risk. The Fund may seek investment exposure to sectors through structured notes that may be exchange traded or may trade in the over the counter market. These notes are typically issued by banks or brokerage firms, and have interest and/or principal payments which are linked to changes in the price level of certain assets or to the price performance of certain indices. The value of a structured note will be influenced by time to maturity, level of supply and demand for this type of note, interest rate and market volatility, changes in the issuer's credit quality rating, and economic, legal, political, or events that affect the industry. In addition, there may be a lag between a change in the value of the underlying reference asset and the value of the structured note. Structured notes may also be subject to counterparty risk. The Fund may also be exposed to increased transaction costs when it seeks to sell such notes in the secondary market.

Sub-Prime Mortgage Risk. Lower-quality notes, such as those considered "sub-prime" are more likely to default than those considered "prime" by a rating evaluation agency or service provider. An economic downturn or period of rising interest rates could adversely affect the market for sub-prime notes and reduce the Fund's ability to sell these securities. The lack of a liquid market for these securities could decrease the Fund's share price. Additionally, borrowers may seek bankruptcy protection which would delay resolution of security holder claims and may eliminate or materially reduce liquidity.

Swaps Risk. The Fund may use swaps to enhance returns and manage risk. The Fund's use of swaps involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and

economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities. Derivative contracts ordinarily have leverage inherent in their terms. The low margin deposits normally required in trading derivatives, including futures contracts, permit a high degree of leverage. Accordingly, a relatively small price movement may result in an immediate and substantial loss to the Fund. The use of leverage may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations or to meet collateral segregation requirements. The use of leveraged derivatives can magnify the Fund's potential for loss and, therefore, amplify the effects of market volatility on the Fund's share price.

Tracking Risk of ETFs. The ETFs in which the Fund may invest will not be able to replicate exactly the performance of the indices or sector they track because the total return generated by the securities will be reduced by transaction costs incurred in adjusting the actual balance of the securities. In addition, the ETFs in which the Fund may invest will incur expenses not incurred by their applicable indices. Certain securities comprising the indices tracked by the ETFs may, from time to time, temporarily be unavailable, which may further impede the ETFs' ability to track their applicable indices.

Turnover Rate Risk: The Fund may have portfolio turnover rates significantly in excess of 100%. Increased portfolio turnover causes the Fund to incur higher brokerage costs, which may adversely affect the Fund's performance and may produce increased taxable distributions.

Underlying Fund Risk. Other investment companies including mutual funds, ETFs and closed-end funds ("Underlying Funds") in which the Fund invests are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in the Underlying Funds and may be higher than other mutual funds that invest directly in stocks and bonds. Each of the Underlying Funds is subject to its own specific risks, but the sub-adviser expects the principal investments risks of such Underlying Funds will be similar to the risks of investing in the Fund. Additional risks of investing in ETFs and mutual funds are described below:

- *Closed-End Fund Risk.* Closed-end funds are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, your cost of investing will be higher than the cost of investing directly in a closed-end fund and may be higher than other mutual funds that invest directly in stocks and bonds. Closed-end funds are also subject to management risk because the adviser to the underlying closed-end fund may be unsuccessful in meeting the fund's investment objective. These funds may also trade at a discount or premium to their net asset value and may trade at a larger discount or smaller premium subsequent to purchase by the Fund. Since closed-end funds trade on exchanges, the Fund will also incur brokerage expenses and commissions when it buys or sells closed-end fund shares.
- *ETF Tracking Risk:* Investment in the Fund should be made with the understanding that the passive ETFs in which the Fund invests will not be able to replicate exactly

the performance of the indices they track because the total return generated by the securities will be reduced by transaction costs incurred in adjusting the actual balance of the securities. In addition, the passive ETFs in which the Fund invests will incur expenses not incurred by their applicable indices. Certain securities comprising the indices tracked by the passive ETFs may, from time to time, temporarily be unavailable, which may further impede the passive ETFs' ability to track their applicable indices.

- *Inverse Correlation Risk:* Underlying Funds that are inverse funds should lose value as the index or security tracked by such fund's benchmark increases in value; a result that is the opposite from traditional mutual funds. Successful use of inverse funds requires that the adviser correctly predict short term market movements. If the Fund invests in an inverse fund and markets rise, the Fund could lose money. Inverse funds may also employ leverage such that their returns are more than one times that of their benchmark.
- *Management Risk:* When the Fund invests in Underlying Funds there is a risk that the investment advisers of those Underlying Funds may make investment decisions that are detrimental to the performance of the Fund.
- *Mutual Fund Risk.* Mutual funds are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, your cost of investing will be higher than the cost of investing directly in a mutual fund and may be higher than other mutual funds that invest directly in stocks and bonds. Mutual funds are also subject management risk because the adviser to the underlying mutual fund may be unsuccessful in meeting the fund's investment objective and may temporarily pursue strategies which are inconsistent with the Fund's investment objective.
- *Net Asset Value and Market Price Risk:* The market value of ETF shares may differ from their net asset value. This difference in price may be due to the fact that the supply and demand in the market for fund shares at any point in time is not always identical to the supply and demand in the market for the underlying basket of securities. Accordingly, there may be times when shares trade at a premium or discount to net asset value.

U.S. Agency Securities Risk. U.S. Treasury obligations are backed by the "full faith and credit" of the U.S. government and generally have negligible credit risk. Securities issued or guaranteed by federal agencies or authorities and U.S. government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. government. The Fund may be subject to such risk to the extent it invests in securities issued or guaranteed by federal agencies or authorities and U.S. government-sponsored instrumentalities or enterprises.

Volatility Risk. The Fund's performance may be volatile, which means that the Fund's performance may be subject to substantial short term changes up or down. The Fund's actual volatility level for longer or shorter periods may be materially higher or lower than the target level depending on market conditions, and therefore the Fund's risk exposure may be materially higher

or lower than the level targeted by the Sub-Advisor. It is possible that the Fund could achieve its target volatility level while having negative performance returns.

Wholly-Owned Subsidiary Risk. By investing in the Subsidiary, the Fund is indirectly exposed to the commodities risks associated with the Subsidiary's investments in commodity-related instruments. Shareholders of the Fund will indirectly be subject to the principal risks of the Subsidiary by virtue of the Fund's investment in the Subsidiary. There can be no assurance that the Subsidiary's investments will contribute to the Fund's returns. The Subsidiary is not registered under the 1940 Act and is not subject to all the investor protections of the 1940 Act. Changes in the laws of the United States and/or the Cayman Islands could result in the inability of the Fund and/or the Subsidiary to operate as described in this Prospectus and could adversely affect the Fund, such as by reducing the Fund's investment returns. The Fund and the Subsidiary are "commodity pools" under the U.S. Commodity Exchange Act, and the Advisor is a "commodity pool operator" registered with and regulated by the Commodity Futures Trading Commission ("CFTC"). As a result, additional CFTC-mandated disclosure, reporting and recordkeeping obligations apply with respect to the Fund and the Subsidiary and may increase their expenses and subject each to CFTC penalties if reporting was found to be deficient. By investing in commodities indirectly through the Subsidiary, the Fund will obtain exposure to the commodities markets within the federal tax requirements that apply to the Fund. However, because the Subsidiary is a controlled foreign corporation, any income received from its investments will be passed through to the Fund as ordinary income, which may be taxed at less favorable rates than capital gains.

By investing in commodities indirectly through the Subsidiary, the Fund intends to obtain exposure to the commodities markets within the U.S. federal tax requirements that apply to the Fund. However, because the Subsidiary is a controlled foreign corporation, any income received from its investments will be passed through to the Fund as ordinary income, which may be taxed at less favorable rates than capital gains. The Subsidiary will, no less than annually, declare and distribute a dividend to the Fund, as the sole shareholder of the Subsidiary, in an amount approximately equal to the total amount of "Subpart F" income (as defined in Section 951 of the Internal Revenue Code of 1986, as amended (the "Code")) generated by or expected to be generated by the Subsidiary's investments during the fiscal year. If the Subsidiary were to fail to make sufficient dividend distributions to the Fund, all or a portion of the income from the Fund's investment in the Subsidiary might not be qualifying income, and the Fund might not qualify as a regulated investment company for one or more years.

Portfolio Holdings Disclosure Policies

A description of the Fund's policies regarding disclosure of the securities in the Fund's portfolios is found in the Statement of Additional Information ("SAI").

Cybersecurity

The computer systems, networks and devices used by the Fund and its service providers to carry out routine business operations employ a variety of protections designed to prevent damage or interruption from computer viruses, network failures, computer and telecommunication failures, infiltration by unauthorized persons and security breaches. Despite the various protections utilized by the Fund and its service providers, systems, networks, or devices potentially can be breached. The Fund and its shareholders could be negatively impacted as a result of a cybersecurity breach.

Cybersecurity breaches can include unauthorized access to systems, networks, or devices; infection from computer viruses or other malicious software code; and attacks that shut down, disable, slow, or otherwise disrupt operations, business processes, or website access or functionality. Cybersecurity breaches may cause disruptions and impact the Fund's business operations, potentially resulting in financial losses; interference with the Fund's ability to calculate its net asset value ("NAV"); impediments to trading; the inability of the Fund, the Advisor and Sub-Advisor, and other service providers to transact business; violations of applicable privacy and other laws; regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs; as well as the inadvertent release of confidential information. Similar adverse consequences could result from cybersecurity breaches affecting issuers of securities in which the Fund invests; counterparties with which the Fund engages in transactions; governmental and other regulatory authorities; exchange and other financial market operators, banks, brokers, dealers, insurance companies, and other financial institutions (including financial intermediaries and service providers for the Fund's shareholders); and other parties. In addition, substantial costs may be incurred by these entities in order to prevent any cybersecurity breaches in the future.

HOW TO BUY SHARES

Purchasing Shares

You may buy shares on any business day. This includes any day that the Fund is open for business, other than weekends and days on which the New York Stock Exchange ("NYSE") is closed, including the following holidays: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving and Christmas Day.

The Fund calculates its net asset value ("NAV") per share as of the close of regular trading on the NYSE every day the NYSE is open. The NYSE normally closes at 4:00 p.m. Eastern Time ("ET"). The Fund's NAV is calculated by taking the total value of the Fund's assets, subtracting its liabilities, and then dividing by the total number of shares outstanding, rounded to the nearest cent.

All shares will be purchased at the NAV per share (plus applicable sales charges, if any) next determined after the Fund receives your application or request in good order. All requests received in good order by the Fund before the close of regular trading on the NYSE every day the NYSE is open (usually 4:00 p.m. (Eastern Time)) will be processed on that same day. Requests received after the close of regular trading on the NYSE every day the NYSE is open will be processed on the next business day.

When making a purchase request, make sure your request is in good order.

"Good order" means your purchase request includes:

- the name of the Fund and share class
- the dollar amount of shares to be purchased
- a completed purchase application or investment stub
- check payable to the applicable Fund

Sales Charge Waivers and Reductions Available Through Certain Financial Intermediaries

The availability of certain sales charge waivers and discounts may depend on whether you purchase your shares directly from the fund or through a financial intermediary. Intermediaries may impose different sales charges other than those listed below for Class A shares and may have different policies and procedures regarding the availability of sales load and waivers or reductions. Such intermediary-specific sales charge variations are described in Appendix A to this prospectus, titled “Intermediary-Specific Sales Charge Reductions and Waivers”. Appendix A is incorporated by reference into (or legally considered part of) this prospectus.

In all instances, it is the shareholder’s responsibility to notify the Fund or the shareholder’s financial intermediary at the time of purchase of any relationship or other facts qualifying the shareholder for sales charge reductions or waivers. For reductions and waivers not available through a particular intermediary, shareholders will have to purchase Fund shares directly from the Fund or through another intermediary to receive these reductions or waivers.

Multiple Classes

The Fund offers Class A, Class C and Class I shares. Each Class of shares has a different distribution arrangement and expenses to provide for different investment needs. This allows you to choose the class of shares most suitable for you depending on the amount and length of investment and other relevant factors. Sales personnel may receive different compensation for selling each class of shares. Each class of shares represents an interest in the same portfolio of investments in The Fund. Not all share classes may be available in all states.

Class A Shares

You can buy Class A shares at the public offering price, which is the NAV plus an up-front sales charge. You may qualify for a reduced sales charge, or the sales charge may be waived, as described below. The up-front sales charge also does not apply to Class A shares acquired through reinvestment of dividends and capital gains distributions. Intermediaries may impose different sales charges other than those listed below for Class A shares and may have different policies and procedures regarding the availability of sales load and waivers or reductions. Such intermediary-specific sales charge variations are described in Appendix A to this prospectus, titled “Intermediary-Specific Sales Charge Reductions and Waivers”. Class A shares are subject to a 12b-1 fee of 0.25% which is lower than the 12b-1 fee for the Class C shares of 1.00%.

The up-front Class A sales charge and the commissions paid to dealers for the Fund are as follows:

Amount of Purchase	Sales Charge as % of Public Offering Price	Sales Charge as % of Net Amount Invested	Authorized Dealer Commission as % of Public Offering Price
Less than \$50,000	5.75%	6.10%	5.00%
\$50,000 but less than \$100,000	4.75%	4.99%	4.00%

\$100,000 but less than \$250,000	4.00%	4.17%	3.25%
\$250,000 but less than \$500,000	3.00%	3.09%	2.50%
\$500,000 but less than \$1,000,000	2.50%	2.56%	2.00%
\$1,000,000 and above (1)	0.00%	0.00%	0.00% (2)

⁽¹⁾ In the case of investments at or above the \$1 million breakpoint (where you do not pay an initial sales charge), a 1.00% contingent deferred sales charge (“CDSC”) may be assessed on shares redeemed within two years of purchase. As explained below, the CDSC for these Class A shares is based on the NAV at the time of purchase. The holding period for the CDSC begins on the day you buy your shares. Some intermediaries may waive the CDSC under certain circumstances. Please refer to Appendix A to this prospectus, titled “Intermediary-Specific Sales Charge Reductions and Waivers” for more information.

⁽²⁾ The Advisor may pay a commission out of its own resources to broker-dealers who initiate and are responsible for the purchase of shares of \$1 million or more in accordance with the following schedule: 1.00% of Class A shares purchases of \$1,000,000 to \$4,999,999; 0.50% of Class A shares purchases of \$5,000,000 to \$9,999,999; and 0.25% of Class A shares purchases of \$10,000,000 and over.

If you invest \$1 million or more either as a lump sum or through rights of accumulation quantity discount or letter of intent programs, you can buy shares without an initial sales charge.

How to Reduce Your Sales Charge

We offer a number of ways to reduce or eliminate the up-front sales charge on Class A shares.

Class A Sales Charge Reductions

Reduced sales charges are available to shareholders with investments of \$50,000 or more. In addition, you may qualify for reduced sales charges under the following circumstances.

Letter of Intent: An investor may qualify for a reduced sales charge immediately by stating his or her intention to invest in one or more of the Funds in the Catalyst Family of Funds, during a 13-month period, an amount that would qualify for a reduced sales charge and by signing a Letter of Intent, which may be signed at any time within 90 days after the first investment to be included under the Letter of Intent. However, if an investor does not buy enough shares to qualify for the lower sales charge by the end of the 13-month period (or when you sell your shares, if earlier), the additional shares that were purchased due to the reduced sales charge credit the investor received will be liquidated to pay the additional sales charge owed.

Rights of Accumulation: You may add the current value of all of your existing Catalyst Fund shares to determine the front-end sales charge to be applied to your current Class A purchase. Only balances currently held entirely at the Fund or, if held in an account through a financial services firm, at the same firm through whom you are making your current purchase, will be eligible to be

added to your current purchase for purposes of determining your Class A sales charge. You may include the value of Catalyst Fund investments held by the members of your immediately family, including the value of Fund investments held by you or them in individual retirement plans, such as individual retirement accounts, or IRAs, provided such balances are also currently held entirely at the Fund or, if held in an account through a financial services firm, at the same financial services firm through whom you are making your current purchase. The value of shares eligible for a cumulative quantity discount equals the cumulative cost of the shares purchased (not including reinvested dividends) or the current account market value, whichever is greater. The current market value of the shares is determined by multiplying the number of shares by the previous day's NAV. If you believe there are cumulative quantity discount eligible shares that can be combined with your current purchase to achieve a sales charge breakpoint, you must, at the time of your purchase (including at the time of any future purchase) specifically identify those shares to your current purchase broker-dealer.

Investments of \$1 Million or More: For the Fund, with respect to Class A shares, if you invest \$1 million or more, either as a lump sum or through our rights of accumulation quantity discount or letter of intent programs, you can buy Class A shares without an initial sales charge. However, you may be subject to a 1.00% CDSC on shares redeemed within two years of purchase (excluding shares purchased with reinvested dividends and/or distributions). The CDSC for these Class A shares is based on the NAV at the time of purchase. The holding period for the CDSC begins on the day you buy your shares. Your shares will age one month on that same date the next month and each following month. For example, if you buy shares on the 15th of the month, they will age one month on the 15th day of the next month and each following month. To keep your CDSC as low as possible, each time you place a request to sell shares we will first sell any shares in your account that are not subject to a CDSC. If there are not enough of these to meet your request, we will sell the shares in the order they were purchased.

Class A Sales Charge Waivers: The Fund may sell Class A shares at NAV (i.e. without the investor paying any initial sales charge) to certain categories of investors, including: (1) investment advisory clients or investors referred by the Advisor or its affiliates; (2) officers and present or former Trustees of the Trust; directors and employees of selected dealers or agents; the spouse, sibling, direct ancestor or direct descendant (collectively "relatives") of any such person; any trust, individual retirement account or retirement plan account for the benefit of any such person or relative; or the estate of any such person or relative; if such shares are purchased for investment purposes (such shares may not be resold except to the Fund); (3) the Advisor or its affiliates and certain employee benefit plans for employees of the Advisor; (4) fee-based financial planners and registered investment advisors who are purchasing on behalf of their clients where there is an agreement in place with respect to such purchases; (5) registered representatives of broker-dealers who have entered into selling agreements with the Advisor for their own accounts; and (6) participants in no-transaction-fee programs of broker dealers that that have entered into an agreement with respect to such purchases.

For more information regarding which intermediaries may have agreements with the Fund or distributor and their policies and procedures with respect to purchases at NAV, see Appendix A to this prospectus, titled "Intermediary-Specific Sales Charge Reductions and Waivers". In addition, certain intermediaries may also provide for different sales charge discounts, which are also described in Appendix A to this prospectus.

Additional information is available by calling 866-447-4228. Your financial advisor can also help you prepare any necessary application forms. You or your financial advisor must notify the Fund at the time of each purchase if you are eligible for any of these programs. The Fund may modify or discontinue these programs at any time. Information about Class A sales charges and breakpoints is available on the Fund's website at www.CatalystMF.com.

Class C Shares

You can buy Class C shares at NAV. Class C shares are subject to a 12b-1 fee of 1.00% of the Fund's average daily net assets. Because Class C shares pay a higher 12b-1 fee than Class A shares, Class C shares have higher ongoing expenses than Class A shares.

Class I Shares

Sales of Class I shares are not subject to a front-end sales charge. Availability of Class I shares is subject to agreement between the distributor and financial intermediary. Class I Shares may also be available on certain brokerage platforms. An investor transacting in Class I Shares through a broker acting as an agent for the investor may be required to pay a commission and/or other forms of compensation to the broker.

Distribution Plans

The Fund has adopted distribution and service plans under Rule 12b-1 of the Investment Company Act of 1940 that allows the Fund to pay distribution and/or service fees in connection with the distribution of its Class A and Class C shares and for services provided to shareholders. Because these fees are paid out of Fund assets on an ongoing basis, over time these fees will increase the cost of your investment and may cost you more than paying other types of sales charges.

Class A Shares. Under the Fund's Plan related to the Class A Shares, the Fund may pay an annual fee of up to 0.50% of the average daily net assets of the respective Fund's Class A Shares (the "Class A 12b-1 Fee") for shareholder services and distribution related expenses. The Fund is currently paying a Class A 12b-1 Fee of 0.25% of its average daily net assets. If authorized by the Board of Trustees and upon notice to shareholders, the Fund may increase the percentage paid under the Plan up to the Class A 12b-1 Fee amount. All or a portion of the distribution and services fees may be paid to your financial advisor for providing ongoing services to you.

Class C Shares. Under the Fund's Plan related to the Class C Shares, the Fund may pay an annual fee of up to 1.00% of the average daily net assets of the respective Fund's Class C Shares. All or a portion of the distribution and services fees may be paid to your financial advisor for providing ongoing service to you.

Opening an Account

You may purchase shares directly through the Fund's transfer agent or through a brokerage firm or other financial institution that has agreed to sell Fund shares. If you purchase shares through a brokerage firm or other financial institution, you may be charged a fee by the firm or institution.

If you are investing directly in the Fund for the first time, please call toll-free 1-866-447-4228 to request a Shareholder Account Application. You will need to establish an account before investing. Be sure to sign up for all the account options that you plan to take advantage of. For example, if you would like to be able to redeem your shares by telephone, you should select this option on your Shareholder Account Application. Doing so when you open your account means that you will not need to complete additional paperwork later.

If you are purchasing through the Fund's transfer agent, send the completed Shareholder Account Application and a check payable to the appropriate Fund to the following address:

Catalyst Funds
c/o Gemini Fund Services, LLC
17645 Wright Street, Suite 200
Omaha NE 68130

All purchases must be made in U.S. dollars and checks must be drawn on U.S. banks. No cash, credit cards or third party checks will be accepted. A \$20 fee will be charged against your account for any payment check returned to the transfer agent or for any incomplete electronic funds transfer, or for insufficient funds, stop payment, closed account or other reasons. If a check does not clear your bank or the Fund is unable to debit your predesignated bank account on the day of purchase, the Fund reserves the right to cancel the purchase. If your purchase is canceled, you will be responsible for any losses or fees imposed by your bank and losses that may be incurred as a result of a decline in the value of the canceled purchase. Your investment in the Fund should be intended to serve as a long-term investment vehicle. The Fund is not designed to provide you with a means of speculating on the short-term fluctuations in the stock market. The Fund reserves the right to reject any purchase request that it regards as disruptive to the efficient management of the Fund, which includes investors with a history of excessive trading. The Fund also reserves the right to stop offering shares at any time.

If you choose to pay by wire, you must call the Fund's transfer agent, at 1-866-447-4228 to obtain instructions on how to set up your account and to obtain an account number and wire instructions.

Wire orders will be accepted only on a day on which the Fund, custodian and transfer agent are open for business. A wire purchase will not be considered made until the wired money and purchase order are received by the Fund. Any delays that may occur in wiring money, including delays that may occur in processing by the banks, are not the responsibility of the Fund or the transfer agent. The Fund presently does not charge a fee for the receipt of wired funds, but the Fund may charge shareholders for this service in the future.

To help the government fight the funding of terrorism and money laundering activities, federal law requires all financial institutions to obtain, verify, and record information that identifies each person who opens an account. This means that when you open an account, we will ask for your name, address, date of birth, and other information that will allow us to identify you. We may also ask for other identifying documents or information, and may take additional steps to verify your identity. We may not be able to open your account or complete a transaction for you until we are able to verify your identity.

Minimum Purchase Amount

The minimum initial investment in each share class of the Fund is \$2,500 for a regular account, \$2,500 for an IRA account, or \$100 for an automatic investment plan account. The minimum subsequent investment in the Fund is \$50. The Fund reserves the right to change the amount of these minimums from time to time or to waive them in whole or in part for certain accounts. Investment minimums may be higher or lower for investors purchasing shares through a brokerage firm or other financial institution. To the extent investments of individual investors are aggregated into an omnibus account established by an investment advisor, broker or other intermediary, the account minimums apply to the omnibus account, not to the account of the individual investor.

Automatic Investment Plan

You may open an automatic investment plan account with a \$100 initial purchase and a \$100 monthly investment. If you have an existing account that does not include the automatic investment plan, you can contact the Fund's transfer agent to establish an automatic investment plan. The automatic investment plan provides a convenient method to have monies deducted directly from your bank account for investment in the Fund. You may authorize the automatic withdrawal of funds from your bank account for a minimum amount of \$100. The Fund may alter, modify or terminate this plan at any time. To begin participating in this plan, please complete the Automatic Investment Plan Section found on the application or contact the Fund at 1-866-447-4228.

Additional Investments

The minimum subsequent investment in the Fund is \$50. You may purchase additional shares of the Fund by check or wire. Your bank wire should be sent as outlined above. You also may purchase Fund shares by making automatic periodic investments from your bank account. To use this feature, select the automatic investment option in the account application and provide the necessary information about the bank account from which your investments will be made. You may revoke your election to make automatic investments by calling 1-866-447-4228 or by writing to the Fund at:

Catalyst Funds
c/o Gemini Fund Services, LLC
17645 Wright Street, Suite 200
Omaha NE 68130

Other Purchase Information

The Fund may limit the amount of purchases and refuse to sell to any person. If your electronic funds transfer is incomplete, payment is not completed due to insufficient funds, stop payment, closed account, a check does not clear your bank, or the Fund is unable to debit your predesignated bank account, you will be responsible for any loss incurred by the Fund. If you are already a shareholder, the Fund can, with notice, redeem shares from any identically registered account in the Fund as reimbursement for any loss incurred. You may be prohibited or restricted from making future purchases in the Fund. The Fund has authorized certain broker-dealers and other financial institutions (including their designated intermediaries) to accept on its behalf purchase and sell

orders. These broker-dealers and financial institutions may charge a fee for their services. The Fund is deemed to have received an order when the authorized person or designee receives the order, and the order is processed at the NAV next calculated thereafter. It is the responsibility of the broker-dealer or other financial institution to transmit orders promptly to the Fund's transfer agent.

Market Timing

The Fund discourages market timing. Market timing is an investment strategy using frequent purchases, redemptions and/or exchanges in an attempt to profit from short term market movements. To the extent that the Fund significantly invests in small or mid-capitalization equity securities or derivative investments, because these securities are often infrequently traded, investors may seek to trade Fund shares in an effort to benefit from their understanding of the value of these securities (referred to as price arbitrage). Market timing may result in dilution of the value of Fund shares held by long term shareholders, disrupt portfolio management and increase Fund expenses for all shareholders. The Board has adopted a policy directing the Fund to reject any purchase order with respect to one investor, a related group of investors or their agent(s), where it detects a pattern of purchases and sales of the Fund that indicates market timing or trading that it determines is abusive. This policy applies uniformly to all Fund shareholders. While the Fund attempts to deter market timing, there is no assurance that they will be able to identify and eliminate all market timers. For example, certain accounts called "omnibus accounts" include multiple shareholders. Omnibus accounts typically provide The Fund with a net purchase or redemption request on any given day where purchasers of Fund shares and redeemers of Fund shares are netted against one another and the identities of individual purchasers and redeemers whose orders are aggregated are not known by the Fund. The netting effect often makes it more difficult for the Fund to detect market timing, and there can be no assurance that the Fund will be able to do so.

HOW TO REDEEM SHARES

You may redeem your shares on any business day. Redemption orders received in good order by the Fund's transfer agent or by a brokerage firm or other financial institution that sells Fund shares, authorized to accept redemption orders on the Fund's behalf, before 4:00 p.m. ET (or before the NYSE closes if the NYSE closes before 4:00 p.m. ET) will be effective at that day's NAV.

The Fund typically expects that it will take up to seven calendar days following the receipt of your redemption request by any method to pay out redemption proceeds by check or electronic transfer. The Fund typically expects to pay redemptions from cash, cash equivalents, proceeds from the sale of Fund shares, any lines of credit, and then from the sale of portfolio instruments, and may pay proceeds in kind (as described below). These redemption payment methods will be used in regular and stressed market conditions.

Shares of the Fund may be redeemed by mail or telephone. If you redeem your shares through a broker-dealer or other institution, you may be charged a fee by that institution.

By Mail. You may redeem any part of your account in the Fund at no charge by mail. Your request, in good form, should be addressed to:

Catalyst Funds
c/o Gemini Fund Services, LLC
17645 Wright Street, Suite 200
Omaha NE 68130

“Good form” means your request for redemption must:

- Include the Fund name and account number;
- Include the account name(s) and address;
- State the dollar amount or number of shares you wish to redeem; and
- Be signed by all registered share owner(s) in the exact name(s) and any special capacity in which they are registered.

The Fund may require that the signatures be guaranteed if you request the redemption check be mailed to an address other than the address of record, or if the mailing address has been changed within 30 days of the redemption request. The Fund may also require that signatures be guaranteed for redemptions of \$100,000 or more. Signature guarantees are for the protection of shareholders. You can obtain a signature guarantee from most banks and securities dealers, but not from a notary public. For joint accounts, both signatures must be guaranteed. Please call the transfer agent at 1-866-447-4228 if you have questions. At the discretion of the Fund, you may be required to furnish additional legal documents to insure proper authorization.

By Telephone. You may redeem any part of your account in the Fund by calling the transfer agent at 1-866-447-4228. You must first complete the Optional Telephone Redemption and Exchange section of the investment application to institute this option. The Fund, the transfer agent and the custodian are not liable for following redemption instructions communicated by telephone to the extent that they reasonably believe the telephone instructions to be genuine. However, if they do not employ reasonable procedures to confirm that telephone instructions are genuine, they may be liable for any losses due to unauthorized or fraudulent instructions. Procedures employed may include recording telephone instructions and requiring a form of personal identification from the caller.

The Fund may terminate the telephone redemption procedures at any time. During periods of extreme market activity it is possible that shareholders may encounter some difficulty in telephoning the Fund, although neither the Fund nor the transfer agent have ever experienced difficulties in receiving and in a timely fashion responding to telephone requests for redemptions or exchanges. If you are unable to reach the Fund by telephone, you may request a redemption or exchange by mail.

Redemptions in Kind: The Fund reserves the right to honor requests for redemption or repurchase orders by making payment in whole or in part in readily marketable securities (“redemption in kind”) if the amount is greater than the lesser of \$250,000 or 1% of the Fund’s assets. The securities will be chosen by the Fund and valued under the Fund’s NAV procedures. A shareholder will be exposed to market risk until these securities are converted to cash and may incur transaction

expenses in converting these securities to cash. However, the Board has determined that, until otherwise approved by the Board, all redemptions in the Fund be made in cash only. If the Board determines to allow the Fund to redeem in kind in the future, the Fund will provide shareholders with notice of such change to the redemption policy.

Additional Information. If you are not certain of the requirements for redemption please call the transfer agent at 1-866-447-4228. Redemptions specifying a certain date or share price cannot be accepted and will be returned. These redemption payment methods will be used in regular and stressed market conditions.

You may be assessed a fee if the Fund incurs bank charges because you request that the Fund re-issue a redemption check. Also, when the NYSE is closed (or when trading is restricted) for any reason other than its customary weekend or holiday closing or under any emergency circumstances, as determined by the SEC, the Fund may suspend redemptions or postpone payment dates.

Because the Fund incurs certain fixed costs in maintaining shareholder accounts, the Fund may require you to redeem all of your shares in the Fund on 30 days written notice if the value of your shares in the Fund is less than \$2,500 due to redemption, or such other minimum amount as the Fund may determine from time to time. You may increase the value of your shares in the Fund to the minimum amount within the 30-day period. All shares of the Fund are also subject to involuntary redemption if the Board determines to liquidate the Fund. An involuntary redemption will create a capital gain or a capital loss, which may have tax consequences about which you should consult your tax advisor.

Exchange Privilege

You may exchange shares of a particular class of the Fund in the Catalyst Family of Funds only for shares of the same class of another Fund in the Catalyst Family of Funds. For example, you can exchange Class A shares of the Catalyst Small-Cap Insider Buying Fund (described in another prospectus) for Class A shares of the Fund. Shares of the Fund selected for exchange must be available for sale in your state of residence. You must meet the minimum purchase requirements for the Fund you purchase by exchange. For tax purposes, exchanges of shares involve a sale of shares of the Fund you own and a purchase of the shares of the other Fund, which may result in a capital gain or loss. In order to exchange shares of the Fund on a particular day, the Fund or its designated agent must receive your request before the close of regular trading on the NYSE (normally 4:00 p.m. Eastern Time) that day. Exchanges are made at the NAV determined after the order is considered received. You will not be charged the upfront sales charge or the CDSC on exchanges of Class A shares. Please read the current prospectus for any Catalyst fund into which you are exchanging before investing.

Converting Shares

Shareholders of the Fund may elect on a voluntary basis to convert their shares in one class of the Fund into shares of a different class of the same Fund, subject to satisfying the eligibility requirements for investment in the new share class.

Shares held through a financial intermediary offering different programs and fee structures that has an agreement with the Advisor or the Fund's distributor may be converted by the financial intermediary, without notice, to another share class of the Fund, including share classes with a higher expense ratio than the original share class, if such conversion is consistent with the fee based or wrap fee program's policies.

An investor may directly or through his or her financial intermediary contact the Fund to request a voluntary conversion between share classes of the Fund as described above. You may be required to provide sufficient information to establish eligibility to convert to the new share class.

Class C shares convert automatically to Class A shares after ten years, provided that the financial intermediary through which you purchased Class C shares has records verifying that the Class C shares have been held for at least ten years. Class A shares are available for purchase by persons in your state or territory of residence and the shares are not subject to a CDSC. You should consult your financial representative for more information about eligibility for Class C share conversion.

All permissible conversions will be made on the basis of the relevant NAVs of the two classes without the imposition of any front-end sales load. A share conversion within the Fund will not result in a capital gain or loss for federal income tax purposes. The Fund may change, suspend or terminate this these conversion features at any time.

VALUING THE FUND'S ASSETS

The Fund's assets are generally valued at their market value. If market prices are not available or, in the Advisor's opinion, market prices do not reflect fair value, or if an event occurs after the close of trading on the domestic or foreign exchange or market on which the security is principally traded (but prior to the time the NAV is calculated) that materially effects fair value, the Advisor will value the Fund's assets at their fair value according to policies approved by the Board. For example, if trading in a portfolio security is halted and does not resume before the Fund calculates its NAV, the Advisor may need to price the security using the Fund's fair value pricing guidelines. In these cases, the Fund's NAV will reflect certain portfolio securities' fair value rather than their market price. Fair value pricing involves subjective judgments and it is possible that the fair value determined for a security is materially different than the value that could be realized upon the sale of that security. The fair value prices can differ from market prices when they become available or when a price becomes available. Without a fair value price, short term traders could take advantage of the arbitrage opportunity and dilute the NAV of long term investors. Securities trading on overseas markets present time zone arbitrage opportunities when events effecting portfolio security values occur after the close of the overseas market, bur prior to the close of the U.S. market. Fair valuation of the Fund's securities can serve to reduce arbitrage opportunities available to short term traders, but there is no assurance that fair value pricing policies will prevent dilution of the Fund's NAV by short term traders. The Fund may use pricing services to determine market value. The NAV for the Fund investing in other investment companies is calculated based upon the NAV of the underlying investment companies in its portfolio, and the prospectuses of those companies explain the circumstances under which they will use fair value pricing and the effects of using fair value pricing. Because the Fund may invest in securities primarily listed on foreign exchanges, and these exchanges may trade on weekends or other days when the Fund does

not price its shares, the value of some of the Fund's portfolio securities may change on days when you may not be able to buy or sell Fund shares.

DIVIDENDS, DISTRIBUTIONS AND TAXES

Dividends and Distributions

The Fund typically distributes substantially all of its net investment income in the form of dividends and taxable capital gains to its shareholders. These distributions are automatically reinvested in the applicable Fund unless you request cash distributions on your application or through a written request to the Fund. The Fund expects that its distributions will consist of both capital gains and dividend income. The Fund intends to make monthly dividend distributions. The Fund may make distributions of its net realized capital gains (after any reductions for capital loss carry forwards) annually.

Please refer to the sections "Additional Information About the Fund's Principal Investment Strategies and Related Risks – Principal Investment Strategies –Distribution Policy and Goals" and "Additional Information About the Fund's Principal Investment Strategies and Related Risks – Principal Investment Risks" for a detailed description of the Fund's distribution policy and tax consequences.

Taxes

In general, selling shares of the Fund and receiving distributions (whether reinvested or taken in cash) are taxable events. Depending on the purchase price and the sale price, you may have a gain or a loss on any shares sold. Any tax liabilities generated by your transactions or by receiving distributions are your responsibility. You may want to avoid making a substantial investment when the Fund is about to make a taxable distribution because you would be responsible for any taxes on the distribution regardless of how long you have owned your shares. The Fund may produce capital gains even if it does not have income to distribute and performance has been poor.

Early each year, the Fund will mail to you a statement setting forth the federal income tax information for all distributions made during the previous year. If you do not provide your taxpayer identification number, your account will be subject to backup withholding.

The tax considerations described in this section do not apply to tax-deferred accounts or other non-taxable entities. Because each investor's tax circumstances are unique, please consult with your tax advisor about your investment.

Certain U.S. shareholders, including individuals and estates and trusts, will be subject to an additional 3.8% Medicare tax on all or a portion of their "net investment income," which should include dividends from the Fund and net gains from the disposition of shares of the Fund. U.S. shareholders are urged to consult their own tax advisors regarding the implications of the additional Medicare tax resulting from an investment in the Fund.

MANAGEMENT OF THE FUND

Advisor

Catalyst Capital Advisors LLC, a New York limited liability company located at 36 North New York Avenue, Huntington, NY serves as Advisor to the Fund. The Advisor was formed on January 24, 2006. Management of the Catalyst Family of Funds is currently its primary business. The Advisor is under common control with AlphaCentric Advisors LLC and Rational Advisors, Inc., the investment advisors of other funds in the same group of investment companies also known as a “Fund Complex”. Information regarding the funds in the Fund Complex can be found at <http://intelligentalts.com>. Under the terms of the management agreement, Catalyst Capital Advisors LLC is responsible for formulating the Fund’s investment policies, making ongoing investment decisions and engaging in portfolio transactions.

Sub-Advisor

The Fund’s investment sub-advisor is Teza Capital Management LLC, located at 150 North Michigan Avenue, Suite 3700 Chicago, IL 60601. The Advisor is registered as an investment adviser under the Investment Advisers Act of 1940. The Sub-Advisor was founded in 2014 and is a registered investment advisor providing investment management services to domestic and foreign pooled investment vehicles.

Subject to the oversight and approval of the Advisor, the Sub-Advisor is primarily responsible for the day-to-day management of the Fund’s portfolio. In addition, the Sub-Advisor is responsible for maintaining certain transaction and compliance related records of the Fund. As compensation for the sub-advisory services it provides to the Fund, the Advisor will pay the Sub-Advisor 50% of the net management fees that the Advisor receives from the Fund.

Portfolio Managers

Dr. Mikhail Malyshev and Dr. Reinhold Gebert are jointly and primarily responsible for the Sub-Advisor’s day-to-day management of the Fund’s portfolio.

Dr. Mikhail Malyshev

Dr. Malyshev is the Chief Executive Officer (“CEO”) of the Sub-Advisor. Dr. Malyshev has served as CEO of the Sub-Advisor since its founding in 2014. Dr. Malyshev has served as CEO of Teza Group LLC since its founding in 2009 and Teza Services LLC, the Sub-Advisor’s parent company, since its founding in 2014, as well as their respective subsidiaries (collectively with the Sub-Advisor, “Teza Group”). Dr. Malyshev earned his Ph.D. in Astrophysics from Princeton University in 1998. He also holds an M.S. in Theoretical Physics and a B.S. summa cum laude in Physics and Mathematics from Moscow Institute of Physics and Technology. Dr. Malyshev worked for Bell Labs conducting scientific research until 2000. From 2000 through early 2003, he worked as a consultant with McKinsey & Company, where he developed substantial experience working for asset management and investment banking clients. Dr. Malyshev joined Citadel Investment Group, L.L.C. in April 2003 as a member of its strategy group. In 2004, he moved to Citadel’s Quantitative Analytics group, where he founded and built a quantitative trading business. Dr. Malyshev became Managing Director and Global Head of High Frequency Trading at Citadel, a position he held until he resigned in the winter of 2009 and formed Teza.

Dr. Reinhold Gebert, Ph.D.

Dr. Gebert has served as Teza Group’s Chief Operating Officer and Chief Risk Officer since 2017. From 2012 to 2017, Dr. Gebert served as Chief Operating Officer and Chief Risk Officer at Gresham Investment Management, a commodities hedge fund manager based in New York. Prior to joining Gresham Investment Management, he was Managing Director and Chief Administrative Officer of the wealth management business at Barclays Wealth Americas; Senior Vice President and Chief Administrative Officer of Private Investment Management at Lehman Brothers; Engagement Manager at McKinsey & Company in its financial services practices. Dr. Gebert conducted postdoctoral research at the Institute for Advanced Study in Princeton and authored numerous articles in superstring theory. He earned his Ph.D. in theoretical physics from the University of Hamburg and his M.Sc. in Mathematics with distinction from King’s College London. He completed his undergraduate studies in physics at the Technical University of Munich.

The SAI provides additional information about the compensation, other accounts managed and ownership of securities in the managed Fund for each of the portfolio manager and the portfolio management consultant.

Advisory Fees

The Fund is authorized to pay the Advisor an annual fee based on its average daily net assets. The advisory fee is paid monthly. The Advisor has contractually agreed to waive fees and/or reimburse expenses, but only to the extent necessary to maintain The Fund’s total annual operating expenses (excluding brokerage costs; borrowing costs such as (a) interest and (b) dividends on securities sold short; taxes; underlying fund expenses; and extraordinary expenses, such as regulatory inquiry and litigation expenses) at a certain level. Fee waivers and expense reimbursements are subject to possible recoupment from the Fund in future years on a rolling three year basis (within the three years after the fees have been waived or reimbursed) if the Fund is able to make the repayment without exceeding the expense limitation in effect at the time of the waiver, and the repayment is approved by the Board of Trustees.

The following table describes the contractual advisory fee and the expense limitation for the Fund.

Contractual Advisory Fee	Expense Limitation
1.90 %	Class A – 2.24 % Class C – 2.99% Class I – 1.99 %

The Fund may directly enter into agreements with financial intermediaries (which may include banks, brokers, securities dealers and other industry professionals) pursuant to which the Fund will pay the financial intermediary for services such as networking or sub-transfer agency, including the maintenance of “street name” or omnibus accounts and related sub-accounting, record-keeping and administrative services provided to such accounts. The Fund, through its Rule

12b-1 distribution plan, or the Fund's Advisor or Sub-Advisor (not the Fund) may also pay certain financial intermediaries a fee for providing distribution related services for the Fund's shareholders to the extent these institutions are allowed to do so by applicable statute, rule or regulation. Please refer to the section of the SAI entitled "Additional Compensation to Financial Intermediaries" for more information.

The Fund's Annual report to shareholders for the period ended June 30, 2020 will contain discussions regarding the basis of the Board of Trustees' approval of the management agreement with the Advisor for the Fund and approval of the sub-advisory agreement between the Advisor and the Sub-Advisor.

FINANCIAL HIGHLIGHTS

Because the Fund has only recently commenced operations, no financial highlights are available for the Fund at this time. In the future, financial highlights will be presented in this section of the Prospectus.

APPENDIX A:

INTERMEDIARY-SPECIFIC SALES CHARGE REDUCTIONS AND WAIVERS

Specific intermediaries may have different policies and procedures regarding the availability of sales charge reductions and waivers, which are discussed below. In all instances, it is the shareholder's responsibility to notify the Fund or the shareholder's financial intermediary at the time of purchase of any relationship or other facts qualifying the shareholder for sales charge reductions or waivers.

MERRILL LYNCH

Shareholders purchasing Fund shares through a Merrill Lynch platform or account will be eligible only for the following load waivers (front-end sales charge waivers and contingent deferred, or back-end, sales charge waivers) and discounts, which may differ from those disclosed elsewhere in the respective Fund's prospectus or SAI.

Front-end Sales Load Waivers on Class A Shares available at Merrill Lynch

- Employer-sponsored retirement, deferred compensation and employee benefit plans (including health savings accounts) and trusts used to fund those plans, provided that the shares are not held in a commission-based brokerage account and shares are held for the benefit of the plan
- Shares purchased by or through a 529 Plan
- Shares purchased through a Merrill Lynch affiliated investment advisory program
- Shares purchased by third party investment advisors on behalf of their advisory clients through Merrill Lynch's platform
- Shares purchased through the Merrill Edge Self-Directed platform
- Shares purchased through reinvestment of capital gains distributions and dividend reinvestment when purchasing shares of the same Fund (but not any other fund within the Trust advised by the Adviser (the "fund family"))
- Shares exchanged from Class C (i.e. level-load) shares of the same Fund in the month of or following the 10-year anniversary of the purchase date
- Employees and registered representatives of Merrill Lynch or its affiliates and their family members
- Directors or Trustees of the Funds, and employees of the Fund's investment adviser or any of its affiliates, as described in the prospectus
- Shares purchased from the proceeds of redemptions within the same fund family, provided (1) the repurchase occurs within 90 days following the redemption, (2) the redemption and purchase occur in the same account, and (3) redeemed shares were subject to a front-end or deferred sales load (known as Rights of Reinstatement)

CDSC Waivers on A Shares available at Merrill Lynch

- Death or disability of the shareholder
- Shares sold as part of a systematic withdrawal plan as described in the Fund's prospectus
- Return of excess contributions from an IRA Account

- Shares sold as part of a required minimum distribution for IRA and retirement accounts due to the shareholder reaching age 70½
- Shares sold to pay Merrill Lynch fees but only if the transaction is initiated by Merrill Lynch
- Shares acquired through a right of reinstatement
- Shares held in retirement brokerage accounts, that are exchanged for a lower cost share class due to transfer to certain fee based accounts or platforms (applicable to A shares only)

Front-end load Discounts Available at Merrill Lynch: Breakpoints, Rights of Accumulation & Letters of Intent

- Breakpoints as described in this prospectus
- Rights of Accumulation (ROA) which entitle shareholders to breakpoint discounts will be automatically calculated based on the aggregated holding of fund family assets held by accounts within the purchaser's household at Merrill Lynch. Eligible fund family assets not held at Merrill Lynch may be included in the ROA calculation only if the shareholder notifies his or her financial advisor about such assets
- Letters of Intent (LOI) which allow for breakpoint discounts based on anticipated purchases within the Fund family, through Merrill Lynch, over a 13-month period of time

RBC CAPITAL MARKETS, LLC (“RBC”)

Front-end Sales Load Waivers on Class A Shares available at RBC

- Employer-sponsored retirement plans.

RAYMOND JAMES & ASSOCIATES, INC., RAYMOND JAMES FINANCIAL SERVICES, INC. & RAYMOND JAMES AFFILIATES (“RAYMOND JAMES”)

Effective March 1, 2019, shareholders purchasing fund shares through a Raymond James platform or account will be eligible only for the following load waivers (front-end sales charge waivers and contingent deferred, or back-end, sales charge waivers) and discounts, which may differ from those disclosed elsewhere in this fund's prospectus or SAI.

Front-end sales load waivers on Class A shares available at Raymond James

- Shares purchased in an investment advisory program.
- Shares purchased through reinvestment of capital gains distributions and dividend reinvestment when purchasing shares of the same fund (but not any other fund within the fund family).
- Employees and registered representatives of Raymond James or its affiliates and their family members as designated by Raymond James.
- Shares purchased from the proceeds of redemptions within the same fund family, provided (1) the repurchase occurs within 90 days following the redemption, (2) the redemption and purchase occur in the same account, and (3) redeemed shares were subject to a front-end or deferred sales load (known as Rights of Reinstatement).

- A shareholder in the Fund's Class C shares will have their shares converted at net asset value to Class A shares (or the appropriate share class) of the Fund if the shares are no longer subject to a CDSC and the conversion is in line with the policies and procedures of Raymond James.

CDSC Waivers on Classes A, B and C shares available at Raymond James

- Death or disability of the shareholder.
- Shares sold as part of a systematic withdrawal plan as described in the fund's prospectus.
- Return of excess contributions from an IRA Account.
- Shares sold as part of a required minimum distribution for IRA and retirement accounts due to the shareholder reaching age 70½ as described in the fund's prospectus.
- Shares sold to pay Raymond James fees but only if the transaction is initiated by Raymond James.
- Shares acquired through a right of reinstatement.

Front-end load discounts available at Raymond James: breakpoints, and/or rights of accumulation, and/or letters of intent

- Breakpoints as described in this prospectus.
- Rights of accumulation which entitle shareholders to breakpoint discounts will be automatically calculated based on the aggregated holding of fund family assets held by accounts within the purchaser's household at Raymond James. Eligible fund family assets not held at Raymond James may be included in the rights of accumulation calculation only if the shareholder notifies his or her financial advisor about such assets.
- Letters of intent which allow for breakpoint discounts based on anticipated purchases within a fund family, over a 13-month period. Eligible fund family assets not held at Raymond James may be included in the calculation of letters of intent only if the shareholder notifies his or her financial advisor about such assets.

MORGAN STANLEY WEALTH MANAGEMENT

Effective July 1, 2018, shareholders purchasing Fund shares through a Morgan Stanley Wealth Management ("Morgan Stanley") transactional brokerage account will be eligible only for the following front-end sales charge waivers with respect to Class A shares, which may differ from and may be more limited than those disclosed elsewhere in this Funds' Prospectus or SAI.

Front-end Sales Charge Waivers on Class A Shares available at Morgan Stanley

- Employer-sponsored retirement plans (e.g., 401(k) plans, 457 plans, employer-sponsored 403(b) plans, profit sharing and money purchase pension plans and defined benefit plans). For purposes

of this provision, employer-sponsored retirement plans do not include SEP IRAs, Simple IRAs, SAR-SEPs or Keogh plans

- Morgan Stanley employee and employee-related accounts according to Morgan Stanley's account linking rules
- Shares purchased through reinvestment of dividends and capital gains distributions when purchasing shares of the same fund
- Shares purchased through a Morgan Stanley self-directed brokerage account
- Class C (i.e., level-load) shares that are no longer subject to a contingent deferred sales charge and are converted to Class A shares of the same fund pursuant to Morgan Stanley Wealth Management's share class conversion program
- Shares purchased from the proceeds of redemptions within the same fund family, provided (i) the repurchase occurs within 90 days following the redemption, (ii) the redemption and purchase occur in the same account, and (iii) redeemed shares were subject to a front-end or deferred sales charge.

The information disclosed in the appendix is part of, and incorporated in, the prospectus

PRIVACY NOTICE

MUTUAL FUND SERIES TRUST

Rev. July 2017

FACTS

WHAT DOES MUTUAL FUND SERIES TRUST DO WITH YOUR PERSONAL INFORMATION?

Why?

Financial companies choose how they share your personal information. Federal law gives consumers the right to limit some, but not all sharing. Federal law also requires us to tell you how we collect, share, and protect your personal information. Please read this notice carefully to understand what we do.

What?

The types of personal information we collect and share depends on the product or service that you have with us. This information can include:

- Social Security number and wire transfer instructions
- account transactions and transaction history
- investment experience and purchase history

When you are *no longer* our customer, we continue to share your information as described in this notice.

How?

All financial companies need to share customers' personal information to run their everyday business. In the section below, we list the reasons financial companies can share their customers' personal information; the reasons Mutual Fund Series Trust chooses to share; and whether you can limit this sharing.

Reasons we can share your personal information:	Does Mutual Fund Series Trust share information?	Can you limit this sharing?
